

# NEWS IN BRIEF

## ANSI Cobol for Criterions

THE long-promised ANSI 1974 Cobol compiler for the NCR Criterion machines has been released in the US and should be arriving in the UK early next year. The compiler was originally announced with the Criterion (CW, April 22, 1976), and scheduled for worldwide release about now.

## Zilog marketing

EUROPEAN marketing responsibilities at Zilog have been taken over temporarily by Bob Sims, vice-president of marketing for the company, following the death of Vic Yates (CW, November 3). Sims will operate from Zilog's European headquarters at Maidenhead, from the end of November.

## Mididisc

AN ultra-compact disc sub-system for the desk-top systems builder has been introduced to the UK market by CII-Honeywell Bull. Developed to produce a disc unit comparable in size to the compact processors now available, it is called the Mididisc and will be available in 10 and 20 Megabyte units.

## Luck of the draw

DELIVERIES of IBM's 3031 and 3032 processors are to be scheduled by the luck of the draw in the same way as 3033 deliveries (CW, June 23). Among the customers "going into the hat" will be Derbyshire County Council, which wants a 3031 to replace its 370/145.

## Cutting costs

THE National Office Reprographic Exhibition will take place from February 14-16 at the Wembley Conference Centre. It is organised by the Business Equipment Trade Association. Aim of the conference is to help the business world cut costs in all departments. Further details from BETA on 01-405 6233.

### TPS THE LEADING TP MONITOR FOR ICL MACHINES

- ★ smooths the path to on-line systems from the simplest beginnings to the most advanced developments
- ★ gets more out of your current machine giving unmatched performance on your 2901, 2902 or 1000
- ★ carries you forward to your new machine directly to DME or to VME by TPS-CARE
- ★ has more than 70 users have been chosen by best users and by those with several years' development behind them

# RTOS cancelled 'for being too good'

SOME interesting alternative explanations have emerged for Univac's cancellation of its planned Real Time Operating System. The software, on which 110m had already been spent, was cancelled last year, in favour of improvements to the Transaction Interface Processor attached to existing 1100 OS systems (CW, November 11, 1976).

A former member of the RTOS development team told Computer Weekly last week that RTOS was cancelled because it was too good. Benchmarks had shown such a performance superiority over 1100 OS, he contended, that there was a real possibility that the latter would become outmoded. Univac was left with the choice of running down the small UK-based RTOS team, or the much larger 1100 OS force.

Univac's own accounts of its reasons for the move vary. Last year, the company said that Tip development would be more economical than continued RTOS development, but last week, user demand for an extensive batch capability as well as real time was given as the primary reason.

Univac admitted that the benchmarks in question had been performed, and had shown RTOS to be superior. But Univac believed that the improvements to Tip would make 1100 OS the superior system, and a spokesman admitted that a comparative benchmark had not since been run.

From an economic point of view, he added, supporting one standard operating system would clearly be less expensive than two, and re-training and assurance of compatibility of future product lines made 1100 OS a safer bet. Cancellation of the RTOS project has resulted in the virtual extinction of Univac's UK software development centre, which is now devoted, ironically, to performing benchmarks. Some staff have been "re-deployed" but many have left.

It would have saved time and money to have assessed the situation more carefully before starting RTOS development, he agreed, "but, after all, it's not the only development that a company has ever cancelled".

# Tesco gives £6m order to IBM

IN its biggest single capital investment, the Tesco supermarket chain is switching from ICL systems to a £6m IBM service including new 3032 and 3031 mainframes and, eventually, point-of-sale equipment in its department stores.

Tesco's likely move to IBM was reported last month (CW, October 27).

Tesco currently has three ICL 1904S computers, an ICL 2903, and a Computer Automation Syta minicomputer system. These eventually will be replaced by an IBM 3032 with 6M bytes of main store, a 3031 with 4M bytes, an IBM 3850 mass storage system, two IBM 3800 laser printers, and 200 VDUs.

The main Tesco computer centre is Cheshunt, Herts, where the IBM system is due to be installed in mid 1978.

Explaining the switch, Donald Harris, a director of Tesco Stores, said: "ICL has its own development timescale, and this did not match our requirements, such as the great emphasis on mass storage and non-impact printers. It was a case of looking ahead to about 1984, and in doing this, IBM offered a sufficiently significant cost advantage."

Harris also said that in moving on to a more powerful system, the company was carrying out a decision made some time ago.

"About three years ago we would have liked to jump in and buy such equipment, but the market was wrong; it pre-dated what we required," he said.

In 1975, the two existing ICL 1904As were enhanced to 1904Ss, and this was carried out as a "holding operation prior to the move away from the 1900s, though not necessarily from ICL."

Originally, four companies were considered: Honeywell, Univac, IBM and ICL. The field was reduced to the latter two early this year, and the machines under evaluation were the 3032 and dual 2878s.

"We had carried out our evaluations on the basis of the 3032," said Harris, "although we did anticipate that something else was 'coming from IBM.'"

It is also looking ahead to the point-of-sale field, and an experimental project is planned.

## IBM to shut in India

THE Indian government has rejected IBM's proposals for restructuring its Indian operations to meet local ownership regulations (CW, September 22), and IBM is closing its business there.

The company is to sell all the machines it has on rental, dispose of its data centres and maintenance operation, and close its factory which manufactures mainly unit record equipment. It hopes to complete the sale within 180 days.

Its present and future will be confined to a liaison office which will handle authorised sales of large systems.

ICL is reducing holdings in its Indian companies to 40%, and manufacture of 2803 there is still under discussion.

## Harris launches Model 6

MORE speed and more power for less money is claimed by Harris Systems for its latest computer, the Harris Model 6 Virtual Machine, announced at Compec last week.

Up to 20% increase in processing power over previous systems in the Harris Series 100 range is claimed.

Both scientific and commercial applications can be handled, and cost of the basic 115 system is £85,000. Upgrading from this to the 125 costs about £30,000 extra and from the 125 to the 135 about £45,000 extra.

### ATLANTIC SYSTEMS 3 USERS

Flexilease is now available on System 3 — save money without sacrificing flexibility.

Lorraine King receives a donation of three computing courses from NCC director David Fimberg.

# Careers in computing for the disabled

TWO visitors to last week's Compec exhibition, David Fimberg, director of the National Computing Centre, and Lorraine King, chairman of the British Computer Society's specialist group for the disabled, presented a series of computing courses donated by the NCC to the specialists group.

The audio-visual courses on Cobol, Filetab and the implications of computing systems are for Stoke Mandeville Hospital for paraplegics, and people with spinal injuries. They will give patients the chance to learn about computing and see if they have the aptitude and interest to follow a career in computing.

A machine for running the video tapes has been presented by Philips.

Lorraine King pointed out that computing is a career which people can follow even with their disabilities, and she appealed for help with the specialist group's work, and in particular for help in finding jobs for people who complete the NCC courses.

Those who can offer help should contact Derek Nicholson, secretary to the BCS Specialist Group for the Disabled, Ludwig Guttmann Hospital, Stoke Mandeville.

### TOTAL SYSTEM MAINTENANCE

...the way to trouble free computing

Whether your computer system is from a single manufacturer, or includes a number of different manufacturers' equipment, DPCE provides a total system maintenance service.

- No debates about who is responsible
- No awkward gaps in maintenance cover
- Regular preventive maintenance avoids trouble
- Experienced engineers, who have earned their reputation maintaining large, complex real time systems (including British Airways)

DPCE is the largest independent computer maintenance company outside the USA.

# Faster micros next year

FASTER versions of the Intel 8085 single chip microprocessor are under development, and should be available by mid-1978, according to Les Vadasz, vice president and general manager of Intel's Microcomputer Components Division.

The company is now in the final stages of developing specifications for the new 8085 variants.

Vadasz's confirmation of the improvements follows industry rumours that the company was working on developments in the performance of the device. A figure of a four times improvement in cycle times has been mentioned. If this figure is finally substantiated, it would reduce the 8085's cycle time from its current rating of 330 nanoseconds, to under 90 nanoseconds.

Similar improvements were also postulated for the 8080 microprocessor, but Vadasz effectively scotched this, saying that although higher speed versions were available through selection at manufacture, developments were planned.

Viewed by some industry observers as Intel's "reason for customers not to buy the Z80 device", it seems likely that at least one version of the 8085 will be pitched near the speed of the faster version of the Z80, the Z-80A, which has a cycle time of 250 nanoseconds.

There has even been mention that speed improvements will make the 8085 a more useful than the 8086, 16-bit microcomputer which is now scheduled for sampling early next year.

## Challenge to 3031

CHALLENGING the IBM 3031 is a new processor from Intel for the top-end of its AS/4 and AS/5 line of IBM plug-compatible CPUs. It is called the 7031 and has a maximum of 8M bytes of main memory, compared to 6M bytes on the 3031. Intel claims its total 7031 package in Europe will be 30% cheaper than the 3031. Hitachi is currently developing an AS/7 for Intel to compete with the 3033 and in Iran, where IBM is in dispute with the government, Intel is planning to enter the market.

## Worker directors

WORKERS at Computer Machinery Company are electing two new worker directors. Those elected, out of eight candidates, will attend monthly board of management meetings to discuss company planning. Voting ends on November 30, and results will be declared early next month.

## By George

THE George 3 DME environment on an ICL 2980 provides about 35% improvement over George 3 on a 10037, according to Phil Fellows, director of Vickers Management Services, which is running a pre-release version of George 3 DME. See page 3.

### Byte Shop bought

THE Byte Shop retail chain in America has been bought out by Logical Machine Corp., the California-based manufacturer of the Adam computer. The Byte chain, which has been suffering from capitalisation problems, will continue to be run as an independent business.

# Briefing

## Suit against SEN fails

IN the High Court last Monday Data General failed in its attempt to win an injunction to stop SEN Electronics from marketing, selling and advertising its Intelvt-1 minicomputer in the UK.

However, Data General says that it will continue to vigorously prosecute its action against SEN for the alleged misuse of proprietary information, even though Mr Justice Whitford said that it had no arguable case on the evidence before him.

The Intelvt-1 is functionally compatible with the Data General Nova and uses a CPU from Keronix Inc of Santa Monica, California, which builds and sells a Nova-compatible machine in the US. Data General has an ongoing suit against Keronix for the alleged misuse of proprietary information while Keronix is suing Data General charging DG with conspiracy to commit arson and wire tap Keronix's telephones (CW, January 30, 1975).

## Laur Punter fails

FOLLOWING the liquidation of consultancy Laur Punter, the Euroco consultancy has confirmed that it is discussing a takeover of the company's assets. A definite conclusion has not yet been reached, said a Euroco spokesman.

## Challenge to 3031

CHALLENGING the IBM 3031 is a new processor from Intel for the top-end of its AS/4 and AS/5 line of IBM plug-compatible CPUs. It is called the 7031 and has a maximum of 8M bytes of main memory, compared to 6M bytes on the 3031. Intel claims its total 7031 package in Europe will be 30% cheaper than the 3031. # COMPUTER WEEKLY

Number 577 Thursday, November 24, 1977 Price 18p

LEFT: Amdahl field engineers at work on the V5 installation at Sunbury. David Helt looks on as Steve Brinkler keys in test programme.

# First UK Amdahl installed by BOC

TIME shoring and APL bureau services will be two of the most important applications for the first Amdahl processor in the UK. This was installed at BOC Datasolve's centre at Sunbury-on-Thames, Surrey, at the weekend, and is expected to go live in about four weeks.

The Amdahl machine, a 470/V5, will effectively double BOC Datasolve's processing power, by providing the same throughput as the bureau's multi-processor 370/158 which is located at its Oxford Circus centre.

BOC Datasolve says that the TSO and APL work currently being handled by the 158 will be transferred to the Amdahl and the 158 will concentrate on CICS and IMS processing. Both machines will also run batch and RJE work.

The four Megabyte 470/V5 will operate under exactly the same system as the 158 configuration, MVS Release 3.7, and all the peripherals will be from IBM.

The 470/V5 will be maintained by Amdahl's own field engineers and Amdahl's headquarters at Sunnyvale, California, will provide real time diagnostics facilities via a dlnl up satellite link to Sunbury.

One of the main reasons for BOC Datasolve selecting an Amdahl machine was the quick delivery offered, but far from deserting IBM the bureau has a 3033 on order which is expected to arrive in about a year from now. A second 3033 may eventually replace the 158 at Oxford Circus.

## Best slogan

WINNER of the Computer Weekly badge slogan competition at Compec was Merle Davies, a lecturer in computer studies at the South West London College. Her entry was: BINARY DOESN'T HURT A BIT. She wins the prize of a bottle of Champagne.

## COMPUTERVIEW

## Software conversion is a costly business

SINCE ICL announced its DME operating systems on the 2900 earlier this year, its 2900 orders have doubled. And the success of DME is not that it is a 2900 operating system, but that it makes the 2900 look like an ICL 1900 or System 4.

At Vickers for example (see page 3), a 2900 is replacing a 1903T. But although the 2900 was commissioned last week, it will be at least two years before it runs fully in genuine "native" 2900 mode. In the meantime it will be running under George 3 DME, giving about a 35% throughput compared to the 1903T and operating like a 1900 George 3 system.

It took ICL a long time on the 2900 to realise two obvious facts of user life: that the cost of conversion is of major significance in choosing new systems, and that a major way of keeping an existing customer base is to provide better conversion aids to new systems than the competition.

DME was announced earlier this year (CW, April 21), over 2½ years after the 2900 was announced.

Before DME, ICL offered — as it still does — microprogrammed emulation packages running under the 2900 VME operating systems.

But these do not really provide the efficiency needed by users — such as Vickers, which requires increased capabilities and reliable live running during the transition from one system to another.

DME was not part of ICL's original 2900 plans, but was developed following strong pressure from existing users and, therefore, from the ICL sales force.

As Fred Lamond pointed out last week in Computer Weekly, ICL has now learnt its lesson, with DME playing a crucial role in the 2900 "swing" computer, which swings into the gap between the 24-bit 2903 and small 1900 systems and the 32-bit larger 2900 machines, giving a smooth transition before swinging into native 2900 mode.

The danger of the DME approach, as one wit has succinctly put it, is that emulation is like masturbation — once you get

used to it you begin to think it is the real thing.

The importance of software conversion costs was highlighted recently by a report which calculated that the American government spends over \$450 million a year on software conversion — and that at least a quarter of that could be saved by more efficient software conversion practices (CW, November 10).

The report was produced by the General Accounting Office, GAO, which is the US federal government's auditing bureau.

One of the GAO's conclusions was that the government should establish a federal software conversion centre which would recognise that software conversion is an expertise in its own right, requiring skilled and experienced personnel for systems evaluation and conversion implementation.

The GAO has followed up this report with some recommendations on how to ease the transition from one type of hardware to another.

Advice includes looking through software and data to decide whether any of it can be thrown away; whether re-writing some programs is better than trying to convert them; whether there are any suitable outside contractors who could implement at least part of the project — and other common-sense advice which so often characterises any general guidelines but which is so often ignored in practice.

In the helter skelter of technological progress, it is often forgotten that the real user mode evolves at a more conservative and leisurely pace.

Gene Amdahl once described his belief that IBM would never provide any radically new system that was incompatible with

existing systems by saying "Users want to reach Nirvana through the gradual evolutionary methods of the Buddhists and not through the painful Christian way of having to die before entering heaven."

This evolutionary approach should not be top of the priority list in the design of any new system because user investment in software systems is now so enormous that any other approach is bound to fail.

It is likely, for example, that the new IBM E-series, which eventually will replace the 370

range, will emerge slowly, over a period of time, and will consist of a range of processor and controller options, with associated software and networking capabilities, rather than be announced suddenly as "a new range."

In the ever-changing, micro-processing, distributed intelligence, superslick-selling services, it is comforting to know that the stabilising sensibility of the user exists to bring computer manufacturers down to earth.

## FOCUS

on the exhibition

ANY dedicated DP manager who completed the course in the recent Datafair, International Business Show and Compec computing exhibition stakes, deserves a merit award.

Meanwhile, evidence of attendance at each exhibition will have to be supplied; sore feet plus a glazed look will not be sufficient.

Perhaps a fully comprehensive collection of plastic bags and hedges complete with computer slogans, plus a substantial collection of authenticated documentation, preferably "bundled," would be accepted as valid proof of attendance. Successful contenders would be those who express a determination not to tackle the full course the next time round.

Just why the organisers of Datafair, IBS and Compec choose to mount their sessions in a sequentially structured mode is mystifying. There certainly seems to be scope for a future policy of distribution. But

for those intent on covering such exhibitions, Focus now presents his survival kit.

Item one would be a good map. While Compec and IBS are relatively easy to broach, Datafair presents hurdles which even the most nimble goat would hesitate to negotiate. Novices to the Hamersmith site could easily discover themselves back in central London (or Slough) rather than the Conant Hotel, such are the hazards of the approach roads.

For those who manage to beat the system and duly arrive at Datafair, a torch is a good bet, power cuts being a traditional feature of this particular event. In fact, Datafair certainly seems to have more than its fair share of handicaps, not the least that of environment. Adapting sundry bedrooms into industry display areas has notable limitations. What may well seem suitable decor within the confines of a hotel bedroom where wallpaper design or wall lights are concerned, only adds to the general sense of incongruity.

It did appear that DPM's were not only few and far between and had obviously decided not to do this fair.

Similarly, DP managers appeared few and far between the rather isolated stands at the International Business Show in Birmingham. At this venue, the survival kit should include salt

biscuits to assist the digestion of numerous machine samples.

The IBS was certainly a for the number of computers which the visitor could see. The fact that there was to be more model gifts than related computer equipment. The enterprise must include a list of excuses for taking it attend.

In contrast, Compec, which should have been a compass for finding it around. Even the entrance, despite every effort known to modern graphics, seemed baffling. Signs pointed to the urinals, without indicating whether the casual DP manager would be welcome. Visions — providing they could find exit route — convinced were large areas unexplored. If they glimpsed carrying select plastic bags, of which had been excluded many.

Physical stamina being vital link in covering all events, the survival kit should include a season ticket to the National Physical Laboratory.

## Rank Xerox 'donates' salesman to disabled

THE answer to the British Computer Society disabled group's prayers for full-time help has come in the form of a Rank Xerox salesman.

He is Glyn Wild, who is being "donated" to the group by Rank Xerox for the first six months of next year as part of a social service leave scheme. Under this scheme a company frees an employee to work for a charity on full pay instead of making a cash donation. About 50 companies recognise the scheme, which was started by some big firms, including ICL, IBM and RNL-Ruyce.

One of Wild's most pressing jobs will be to set up a central information base, gathering information which is not present in scattered reports, or in people's heads.

At the same time he will be trying to place programmers trained at centres for the disabled, approaching the EEC for financial support and arranging the manufacture and marketing of the Mate terminal designed by Essex University for the disabled (CW, July 21).

The development of Mate is being funded by the proceeds of this year's Computer

Weekly Charity Ball, and the terminal is expected to be ready for marketing by Christmas.

Towards the end of his six-month stint Wild will look for someone to take over the director's job, probably on the same basis.

Emphasising the value of Wild to the disabled group, the chairman, Lorraine King, said, "We have been hoping all this year to get a full-time co-ordinator. This arrangement overcomes our main problem, a shortage of cash."

## Comish to be ICL marketing director

The post of international marketing director at ICL is to be held by Douglas Comish. The vacancy arose with the appointment of the previous director, Dr Christopher Wilson to succeed Geoffrey Cross as managing director of ICL (CW, November 17).

Ooug Comish joined Leo Computers in 1958. He spent to prominence last year when he was appointed director of small business systems with specific responsibility to integrate the international operations of Singer Business Machines into ICL (CW, March 26, 1976).

This major undertaking was successfully completed on October 1, 1976. Since then, he has been director of development programmes at ICL.

The international division takes in all ICL operations outside Europe, including Australia, South Africa, the Far East, Oceania and the Americas.

## Committee to 'vet' Vickers orders

THE Vickers organisation has set up a central computer policy committee to co-ordinate the computer investment of all its operating divisions and companies. The chairman of the committee is Professor Gordon Black, director of the Manchester Regional Computing Centre, head of computational science at the University of Manchester Institute of Science and Technology, and a director of ICL.

The Vickers organisation includes the engineering group, which has a nationwide network based on ICL systems, and Roneo Vickers, which has an IBM 370/138 at Romford, Essex. Last week, the engineering group commissioned a 2960 to take over from a 1903T at its Newcastle computing centre.

Assistant managing director of Vickers Jim Hendon, who is also a non-executive director of ICL, said in Newcastle last week that no mainframe or other major computer equipment or service within Vickers can now be ordered without being vetted by the committee. The aim of the committee, he said, was to optimise the use of computer resources across the organisation but that it was not seeking to impose a standard solution in all operations.

The engineering group's £750,000 2960 was one of the first to be ordered from ICL and is currently running a pre-release version of George 3 DME, which emulates the 1900 George 3 operating environment on a 2900.

The engineering group's £750,000 2960 was one of the first to be ordered from ICL and is currently running a pre-release version of George 3 DME, which emulates the 1900 George 3 operating environment on a 2900.

The engineering group's £750,000 2960 was one of the first to be ordered from ICL and is currently running a pre-release version of George 3 DME, which emulates the 1900 George 3 operating environment on a 2900.

## Harris joins Marcol group

THE Marcol group has been strengthened by the appointment of John Harris, manager of ICL's education region, as a director. Harris will be responsible for Marcol's growing business with hotel systems and for contract operating and software business.

Harris has been with ICL for 12 years.

Marcol expects a turnover of £2.25 million this year, compared with £1.5 million for the previous 18-month period. On January 1 it officially takes over J. Harwell Data Processing, the London company which specialises in ICL systems. Harwell will run as a subsidiary company, headed by its current managing director Jack Harwell.

## Keeping tracks on RAC rally

AS the surviving competitors in the Lombard-RAC Round Britain Rally motor into York this evening (Thursday), at the end of a 19,000 mile trip which started at Weymouth last Sunday morning, a specially installed NR 3200 will be compiling the final results, which should be completed by about 20.00.

This is the first time a computer has been used exclusively to compile rally-watchers to keep

track of progress as the cars rumbled through Wales, Scotland, the Lakes and North Yorkshire. Up-to-the-minute details have been displayed on VDUs at York, and printed out on terminals at the four major service areas along the route.

Software was written by Harland Data Systems of Hull, and was based on programs the company had produced for the Mintex Rally, in February.

## Access control conference

THE automatic signature verification system, Verisign, developed by the National Physical Laboratory (CW, December 18, 1976), is one of the main subjects to be discussed at a one-day conference on automatic access control systems at the Royal Institution in London on November 29.

The conference is being organised jointly by the Institute of Electrical Engineers and the Institute of Electrical and Radio Engineers, but is open to non-members of these bodies, in-

cluding data processing managers interested in controlling access to computer rooms or access to computer files.

One of the speakers will be from the Home Office and will describe access control techniques involving fingerprints, while EMI and Cambridge Consultants will talk about "bank credit" cards. A user's view of access control will be presented by a speaker from the UK Atomic Energy Authority.

The conference fee is £17.25, including lunch.

## Prophet likely to profit from the US

A FINANCIAL modelling package, developed in Ireland could find its way into the lucrative US market early next year. Known as Prophet, the package incorporates aids to model building which are also useful in a far wider program development context.

Prophet, already released in the UK, was developed by the Irish Nitrogen Company, NET, of Arklow, which manufactures fertilisers. To market the software an ad hoc company known as Sigma has been formed by Denis Fitzgibbon, managing director of Gamma Data Systems, a Dublin-based bureau.

There is no direct connection between Gamma Data Systems and Sigma, but the bureau is offering the Prophet package, which is also run on Gamma bureaux in London and Nottingham. Like Gamma Data Systems, these are partly owned by consultancy Gamma Associates.

Apart from NET, there is one other in-house Prophet user, the Irish Management Institute, in Dublin. Users of the package on the bureaux number "four or five."

Prophet runs on Digital Equipment PDP-11s. Financial models are developed in a very high-level language and pre-compiled into Basic Plus.

To allow amendment of the Basic program and speed its running, an editor and optimiser are included. These can be used on any text and any Basic program respectively, and are already arousing general interest, says Fitzgibbon.

The size of the potential US market for Prophet was seen at first hand by Gamma Associates managing director Dr George Cogan, on a recent visit to the US. Definite negotiations have not yet begun but conclusion of an agreement is expected in the first half of next year.

## Growing show

THREE times as big as the last show in Brighton, Communications 78 is scheduled for April 4-7, 1978, and will for the first time be held at the National Exhibition Centre in Birmingham. Over 200 companies and organisations have already booked 90 per cent of the stand space.

## Exciting things happen with Prime Computer

With 24 hour working and 20 tons of rock removed with every shovelful, Taylor Woodrow need their Prime computer to optimise open cast excavation — profitably. If your business has requirements as diverse as structural analysis, vehicle route planning and financial project control, Prime has a computer in its range to suit.

## Multilateral thinkers

THOSE disposed to dismiss as a paper tiger the threat of the Japanese computer industry to the world hegemony of the US companies, particularly IBM, may be disposed to think again when they consider what is going on at Japan's leading mainframe manufacturer, Fujitsu.

According to the Japan Economic Journal, the Mecca for all hudding Japanese systems engineer is Fujitsu's "Information Disposal System Laboratory" in Kanata, Tokyo. Although the title makes it sound like a glorified municipal tip, the description of what goes on inside dispels any such misapprehensions. "The atmosphere of this laboratory is completely different from that of any other ordinary office or manufacturing plant," writes the Journal.

"Men are almost perpetually busy with their special rulers, formulating various programs by writing down cryptic circles, angles and lozenges. Then there are mountains of input cards. The workers' brains are thus worked to their very limit and their ways of thinking are never allowed to roam in single directions."

"The workers have to think not only vertically and horizontally, but also diagonally and even reversely. For such mental legerdemain, extremely tough nerves and devotion are mandatory."

One can well believe it. Our friendly neighbourhood IBMer is a pretty odd sort of chap, but he's not that odd. The question raised is whether IBM can compete in the long term with such single-minded devotion to duty. Today, motorcycles and tanis cars. Tomorrow, the world, Rex?

## Ghost in the machine

AN interesting postscript to the recent Futureview interview with Arthur C. Clarke (November 10):

Webster: There's one area in computers that is growing quickly, and that is computer crime.

Clerke: Yes, it's a growth industry.

Webster: It has a whole terminology of its own:

## The sticking point...

THE news that the Tesco supermarket chain is to spend £6 million with IBM for this week's special computer offer, a 3031, a 3032, and other assured commodities (CW, November 17) has prompted me into considering the obvious — whether Tesco will attempt to pay in unused Green Shield stamps.

If they do, just what can IBM expect to get through its corporate letter box? Intrigued by this question, I took my 5 Mbyte Abacus in hand and set to work. The result is, to say the least, a large number.

IBM may just be on the receiving end of 18,181,818 Green Shield stamps. If Tesco are kind, and have long tongues, this could be reduced to 14 Megabooks. There is one problem: 3031s and 3032s aren't in my Green Shield catalogue.

## Pansophistry

PROOF that not all the visitors to Compex were data processing geniuses (genii?) was provided by some of the entries to a competition run at the show by software house, Pansophic. Visitors had to guess how many source statements there are

## IBM releases third Series 1 operating system

RELEASING its third Series 1 operating system in the US, IBM has given users a couple of surprises. The software has been released a month earlier than expected, due to early completion of testing, and it will control user programs in the maximum 128 Kbytes of memory.

The previous operating systems for the machine, CPS and RPS, only supported programs

in 64 Kbytes. The third product known as the event-driven executive, was expected to have the same limitation.

As the name implies, EDX is designed chiefly to handle programs dependent on external events, for example data acquisition and process control. In this role, the Series 1 seems likely to take over some of the applications previously managed by IBM's System 7. The

availability of such software also emphasises the distributed processing orientation of the Series 1.

The larger memory capacity will, however, make the EDX system attractive to a wider range of users than the specialist, since large and more complex user programs and systems can now be accommodated. EDX provides a multiprogramming and multitasking environment, and includes software for dataset management, distributed processing, and communication with a host computer.

EDX has not yet been announced in the UK.

## Gray quits presidency

REFLECTING the metamorphosis of Cray Research Inc from a development into a production and marketing company, founder and chief executive Seymour Gray has been appointed chairman. Gray hands over the post of president to John Rollwagen, previously vice-president for marketing and finance.

Rollwagen will be responsible for day-to-day operations and marketing, freeing Gray to concentrate on technical leadership for research and development.

The company builds large-scale vector processors designed for fast execution of complex scientific and technological tasks. They need to be frantically by a large general-purpose mainframe in most applications.

Dr George Coggan

## Gamma to expand in Europe and US

AFTER several years of rapid expansion in the UK, the Digital Equipment specialist systems house, Gamma Associates, is aiming to expand overseas with joint ventures on the Continent and in the US.

Gamma's managing director, Dr George Coggan, is currently talking to US systems houses that might benefit from an association with Gamma.

He told Computer Weekly: "We are ten times the size of the average DEC systems house in the US and have been associated with DEC five times as long. In fact, we probably have the largest body of DEC software expertise outside DEC itself anywhere."

where. In addition, few US organisations have our experience in running a PDP-11 based sharing service."

Gamma is already closely involved with a US software house, AW Consultants in Philadelphia. In a joint venture called Gamma Telecommunications (CW, May 8), it sells systems that run on special multi-terminal network software to retail outlets, warehouses and other organisations in the UK.

The Continental market being looked at most closely by Gamma are Benelux and Scandinavia where the firm believes that the much lower cost of software development in data will enable it to supply services at 70 per cent of the price charged by local type houses.

Gamma Associates formed a company, Gamma European Systems, specifically to set up joint venture firms on the Continent. Gamma Associates is aiming for a turnover of £2.5 million in the next financial year.

## CW/DPMA workshop next week

Date: December 1.

Venue: Holiday Inn, George Street, London W1.

Price: £45 plus VAT (£40 plus VAT for DPMA members) including lunch and refreshments.

I wish to order... ticket(s) at £45 plus VAT (at 8%) for the CW/DPMA workshop to be held at the Holiday Inn on December 1.

DPMA members can apply for reduced rate tickets via the form that is being sent to all DPMA members. Cheques should be made payable to IPC Business and Industrial Training Ltd.

Name .....

Job function .....

Address .....

Telephone number .....

If you are interested in attending any future workshop because the December 1 meeting is full or is inconvenient, tick here ☐

Return this coupon to Computer Weekly/DPMA Workshop, IPC Business and Industrial Training, Throwley Way, Sutton, Surrey SM1 4QQ.

COMPUTER WEEKLY in conjunction with the Data Processing Management Association is organising a workshop on December 1 aimed at improving the skills of DP management in communicating with end users.

The workshop will be given by Nigel Laurie, who has more than 10 years' experience in the communications and computer fields.

Numbers are limited to ensure that all delegates are able to participate fully in the day's work, but if there is sufficient demand, further workshops will be held.

In order to ensure that the workshop is tailored to DP management's needs, the DPMA is currently conducting a survey of its members on DP/user communications. Survey forms can be obtained from the DPMA, 27a York Road, Morden, Surrey SL8 1SQ. Tel: 0028 28970.

If you would like to attend the workshop, please complete the coupon above.

## Polytechnic System

THE computer system installed at City of London Polytechnic, and referred to by Derek Esterson in his article on computers in schools (CW, November 17), is a Systime 8000 based on a Digital Equipment DP0-11.

# ANNOUNCING U.K. POST OFFICE APPROVAL FOR gandalf LDM 404 AND PACK SYSTEM

"PRODUCTS FOR THE DIGITAL AGE"

- ★ Low cost only £800
- ★ Full complement of signal status indicators
- ★ Remote and Local Loopback
- ★ Constant, Controlled and Simulated Control-lad Carrier operation
- ★ Simple Installation
- ★ Interface meets EIA RS 232 C and CCITT V.24 requirements
- ★ Dual Channel option enables two 2400 bps channels to be carried simultaneously
- ★ RM 3404 B rack mounted equivalent fits Gandalf 3000 Cabinet
- ★ SELF CHECKING is fast and easy using the Local and Remote Digital Loopback and Local Analog Loopback capability

The LDM 404B is a Limited Distance Modem designed for full duplex synchronous communication at 4800 bps. The unit operates over 4-wire voice grid metallic lines (conditioned or unconditioned), T Carrier and most other carrier systems. It is ideal for use in metropolitan areas for "mid-range" applications where short haul units are not satisfactory but distances do not warrant the cost and complexity of long haul modems.

★ ★ ★ ★ ★

- ★ Post Office Approved
- ★ Resultant savings outweigh costs in less than one year
- ★ Will allow contention of up to 254 terminals for up to 126 computer ports classified by service, speed, etc.
- ★ High speed synchronous and asynchronous operation
- ★ Easily expanded from minimum size in increments of 4 terminals and 8 ports

For further details contact:

MASTER SYSTEMS  
(Data Products) LTD

306 Yorktown Road  
Camberley, Surrey  
Tel. (0276) 32903  
Telex 858180

## KEYBOARD CLASS SELECT

Keyboard Class Select enables terminal users to request a specific service class using only the terminal keyboard, without additional hardware. Since all communications remain at the "normal" terminal speed, existing communications links need not be altered. PACX III can operate over specialised digital networks, the dial-up system or multiplexers.

## STATISTICS PORT

A special Statistics Port is provided which may be connected to the CPU or other data handling device. The port outputs a complete record of all connections, disconnections and unsuccessful requests, accompanied by time of day. Commands are accepted to perform control functions such as changing port classes or forcing connections.

Deposited 134

## MICHIE'S PRIVATEVIEW

## Aha!—that flash of insight

IN the October issue of Scientific American Martin Gardner discusses the latest version of Robert Abbott's game of Eleusis. At the University of Colorado, Abbott, as a psychology student, became interested in the "aha" reaction—that flash of insight in which we grasp the underlying principle behind some messy-looking phenomenon.

In Eleusis the dealer has a secret rule in his head which governs what cards may and may not legally be laid face up in sequence.

The players take it in turns to add to the lengthening sequence in an attempt to work out by trial-and-error guesswork, i.e. by "inductive reasoning", what this secret rule is. Whenever they add cards which fail to fit, they collect penalties. Of the process of induction Gardner rightly remarks that it is "the process at the very heart of the scientific method."

Special interest should, therefore, attach to computer implementations of induction. Software systems are certainly needed to do more than donkey-work for the mathematician and scientist. Here, I note two recent laboratory advances in this area, one mathematical and the other in applied science.

The natural numbers, with the rules of arithmetic, constitute established territory for mathematical discovery, which in aggregate makes up modern number theory. There are tantalising problems which can be very simply stated. Probably the most celebrated is Fermat's conjecture that expressions of the form  $x^n + y^n = z^n$  are not satisfiable for  $n$  greater than 2. Trial and error and inductive reasoning certainly play their part when mathematicians arrive at in-

teresting conjectures. Could a computer program, set loose in this problem space, wander around looking for good conjectures?

One reaction is "If all it is going to give us are things like Fermat's conjecture, then why bother?" After the spectacular application of prime factor theory to computer privacy, see D. W. Davies' articles (CW, September 15 and 22), I hope that computer people of all people will not sell number theory so short!

Doug Lenat, working on Stanford's Heuristic Programming Project, developed a program which wanders around guessing in much the style aided to above. Starting from bare essentials it rediscovered Euclid's "unique factorisation" theorem which states that a composite number can be factored into primes in only one way.

This theorem is basic to the above mentioned encryption procedure.

Lenat's program, which has the curious name AM, first had to discover the concept of a prime number, and before that the concept of a number. It started life with a collection of concepts no richer than those of a child of four—objects like sets, lists, bags (sets allowing replication of elements) and truth-values; relations like membership and equality; operations like inversion, composition and intersection.

It would be a mistake to shrug off this experimental program on the grounds that it has not yet discovered anything which mathematicians did not already know about. One of its discoveries, "maximally divisible numbers," was at first believed by Lenat to be new, and by a number of mathematicians to whom he showed it. Later it

turned out that Ramanujan, G. H. Hardy's self-taught collaborator, had got there first.

If from such modest starting materials AM can raise itself to these levels, what may not be achieved by an improved version working on an enriched stock of starting concepts?

If machine induction merely brightens the lives of pure mathematicians, the workday world will be respectful, but unimpressed. Let us turn to a specialism which is more earthy, in more than one sense.

In the rich agricultural state of Illinois, when the soy-bean cultivator's crop has been smitten with one of the 20 or so common soy-bean diseases, correct diagnosis may make the difference between a ruinous harvest and riches. The State operates a network of Agricultural Extension Offices which farmers can phone for advice. Queries which cannot be dealt with on the spot are sent to university plant pathologists, who are greatly overburdened with requests. Large delays and backlogs develop.

An inductive inference program, AQ11, has been developed at Illinois University by Ryszard Michalski and students. It is a logic generaliser, and could just as well be given Eleusis problems. What it was actually given was data on 307 diseased plants as a list of measurements on 35 different features for each plant, together with a confirmed diagnosis.

From this the program developed its own diagnostic rules which were tested on 378 new cases, getting 374 of them right. Dr B. Jacobsen, the plant pathologist who collaborated on this work, developed his own set of rules, which scored only 83 per cent on the test sample. In attempts to improve them, the rate rose to 89 per cent. Jacobsen's verdict on the machine-generated rules, after investigation and reflection, was full acceptance.

The planned next step is to equip Extension Offices with terminals online to the new rule-based system, so that staff can get the farmers quicker, and it seems more accurate, answers.

Computing systems have heretofore been used only for deductive-type operations. But new additions to the information engineer's tool-chest may be on the way.

Donald Michie

## Puzzler

A SQUARE-BASED pyramid has eight edges and five vertices. This week's puzzle is to give each edge a different number, from 1 to 10, in such a way that "the sum of the edges meeting at each vertex" is 16 in all cases.

The big problem is to decide which eight of the available ten numbers must be used. See page 47 for the solution, which is unique apart from rotations and reflections.

## SOFTWARE FILE

## Business Basic 'first' on micro

THE range of applications software produced by consultancy KPG on its Solitaire system (CW, August 4) conceals an interesting systems software product—what is claimed to be the first business-oriented Basic on a microprocessor.

All the commercial packages on the Intel 8080-based Solitaire are written in this extended form of Basic and the machine has a resident interpreter.

KPG is, at present, releasing the Business Basic interpreter only to run the packages. A release for customers to write their own programs is a technical feasibility, but KPG does not have the resources to support such users fully, a spokesman admitted. A future release of this nature was not discounted.

Business Basic adds several commercially useful functions to standard Basic, particularly in the areas of string handling, screen and print formatting and management of indexed sequential files.

Solitaire in its present configuration is based on a three-processor 8080. CPU functions, I/O and visual display management each being handled by a separate machine. The Basic interpreter can, however, run on other 8080s and is quite easily

convertible to other makes of micro, said KPG.

In the debate between compiler and interpreter philosophies for micros, KPG has come out while heartily in favour of interpreters, largely because they allow immediate testing of code during program development. Some companies, favouring faster run-time, have plumped for a compiler approach.

KPG's current applications software for the Solitaire includes word processing, sales, purchase and nominal ledger, time analysis accounting systems for

## £17,500 Mascot deal

AIMING to ease use of the Mascot software development technique with Coral 86, the Ministry of Defence has awarded a £17,500 contract to Systems Designers Ltd, to study formal definition of the Mascot methodology and implementation of the support software, in a way more amenable to Coral programming than to the present Algol 68 environment.

Some Coral implementations of the software have already been made, but it is SD's eventual aim to make the software

portable, to dovetail with the portable Coral compiler. Extensions will also be made to the Coral language to ease programming under Mascot.

Mascot was originally developed by the Royal Signals and Radar Establishment. SD's initial Coral versions of the port software, for the Taurus 300, will appear next year. An initial version of the methodology document is already circulating.

At the same time, Macro 4 announced further enhancements for Logout, the package which prints relevant parts of the console log on a user's run printout.

The product can now be used to control console messages requiring, so that the user can submit the replies in any order without holding up work.

At the same time, Macro 4 announced further enhancements for Logout, the package which prints relevant parts of the console log on a user's run printout.

The product can now be used to control console messages requiring, so that the user can submit the replies in any order without holding up work.

## Disc space manager from Macro 4

YET another product has been added to the growing range of IBM-oriented disc-space management aids on the market. The latest product, Spaceman, has been released by Macro 4, of Wallington, Surrey.

Spaceman was originally developed by Corodale, Macro 4's Dutch Associate company and already has three users in Holland. There are, as yet, no UK users of the package.

Oriented to IBM 370 DOS/VS environments, it is claimed to avoid several points of incompatibility with standard IBM software.

In particular, non-standard Volume Table of Contents

entries are avoided and Spaceman's job control language is claimed to be able to co-exist with standard DOS/VS JCL.

Having defined the initial extent of the required disc space and a few other controls, Spaceman requires no more JCL cards relating to placing of disc files, says Macro 4.

Files are arranged automatically in an efficient way, and unused space on a file is freed for future use.

The user can, however, control the order in which the discs on line are examined to decide the placing of the files.

Seven partitions are sup-

ported, and JCL is particularly dependent. Thus a given file can be executed in any particular job scheduling system, and the software maintains an accurate catalogue of disutilisation, generates a range of status reports, Spaceman costs 16 per month.

Solar has the dual aims of speed of response and ease of use, says Safe. The user interface is interactive, prompting for required information. Such prompts are particularly useful for novice users, and can be avoided when a user becomes experienced.

The packages can be easily tailored to a company's requirements, claims Safe, a factor which is particularly useful for users converting from manual systems.

The Solar package can reflect the manual procedures and interface with them during a gradual cutover process. It can also be tailored to individual System Ten configurations by addition of small modules.

Solar can be fully interfaced to Safe's production control software, Safe's, also implemented on the System Ten.

ANOTHER package has been released to aid company administrators to cope with increasing government legislation, this time in the pensions area. The Passman software, from financial software consultants Heywood and Partners of Liverpool, is particularly concerned to handle the requirements of the 1975 Act of Parliament on this subject.

Passman is a parameter driven sys-

## Parameter driven pensions scheme

tem which maintains files of all a company's pensionable employees, continually updating the records with all entered pension transactions.

Required government forms are generated as well as user-defined internal reports, auditors' information and periodic—usually annual—pension statements.

The package is written in Cobol and avoids machine-specific subroutines as much as possible, said a spokesman.

Hence it should be easily portable. At present, versions exist for IBM 380/370 and ICL 1900 and 2903/4 machines, but one of the first prospective users requires a conversion to Univac equipment.

There are already about 10 "highly probable" prospective users of the package, said Heywood. Passman can be used on an in-house machine, or Heywood's ICL 2004 bureau.

Non-standard modules can be added to the Passman system to manage accounting of pensions contributions and payroll for employees and dependants entitled to a pension.

There are already about 10 "highly probable" prospective users of the package, said Heywood. Passman can be used on an in-house machine, or Heywood's ICL 2004 bureau.

## CMG 'first' with overseas system done in UK

WITH the problems of UK software development work for overseas clients receiving much attention in recent months (CW, June 9 and November 10), the Computer Management Group has completed its first development of this type, for an unnamed multinational manufacturing company's Helsinki, Finland, office.

The project, worth £25,000 to CMG, involved the design and implementation of an accounting and manufacturing control system for the IBM System 32.

The software includes sales, purchase and nominal ledger, stock control, monitoring of work in progress, cost accounting and collection of statistics.

CMG has done work for many overseas clients before, but the

jobs have always involved considerable work at the customer's site. Design, coding and testing for the latest project were done completely in the UK, with test data being sent over from Finland. Only now has a CMG representative gone to Finland to supervise the installation of the software.

The product was written with flexibility in mind, and will also be implemented by the client on its installations in other countries. It can be transferred to the IBM System 34, or, with small alterations, to the System 3, claims CMG.

The software could be marketed generally through CMG in the future, said a spokesman, but a definite agreement had not been made to do this.

## Online accounting on an ICL System Ten

VENTURING further into the field of software products for the ICL System Ten, Safe Computing of Leicester has developed an accounting suite for the machine comprising sales, purchase and nominal ledger systems. The product is known as Solar (Safe's On Line Accounting Routines).

Solar has the dual aims of speed of response and ease of use, says Safe. The user interface is interactive, prompting for required information. Such prompts are particularly useful for novice users, and can be avoided when a user becomes experienced.

The packages can be easily tailored to a company's requirements, claims Safe, a factor which is particularly useful for users converting from manual systems.

The Solar package can reflect the manual procedures and interface with them during a gradual cutover process. It can also be tailored to individual System Ten configurations by addition of small modules.

Solar can be fully interfaced to Safe's production control software, Safe's, also implemented on the System Ten.

## CGS plans move into US market

A MOVE into the US market is likely for the European CAP Gemini-Sogefi consultancy group next year. No firm arrangements have been concluded yet, chairman Philippe Dreyfus told Computer Weekly.

CGS is definitely investigating the possibility of founding a US office.

At the same time, M Dreyfus confirmed that between 10 and 15 per cent of the group's shares have come on to the market. These shares belonged to two former directors who left the group two years ago. Contrary to US reports, the group is not looking for a US company to acquire the shares. "They may be taken by any company, US, European or British," said Dreyfus.

## Dynamic OS

THE latest operating system for Interdata, Dynamic OS/32 MT, and its associated Multi-Terminal Monitor (CW, October 27) have, as expected, been officially released in the UK. The operating system is priced at £3,350 and MTM at £1,680.

## PROGRAMMER NOTES

## Ode to the joys of freelancing

MANY of our past discussions on the programmer's life have made the tacit assumption that most of our readers are permanently attached to one particular company.

With the increasing prominence of the freelance programmer, this view, and its attendant discussions of such topics as "your installation's programming standards", are perhaps becoming less and less consistent with the real state of the modern programming world.

Perhaps it is time we gave the freelance programmer a platform to discuss their view of the joys and problems of programming.

To consider the above question first: most installations nowadays have, for good or ill, their own program development techniques and standards, ranging from comprehensive strategies like the Jackson technique to simple data naming conventions.

It would be interesting to see whether freelance programmers fit in easily with these established environments, or whether it is a source of conflict.

Does the installation try to impose its standards on you, and do you, in consequence, have to be flexible? Or do most installations allow a freelance to program in his or her own style, risking possible conflict with the permanent programmers?

The problems of selection of appropriate programming techniques are entirely different in the freelance business.

The employer knows the

freelance proves inadequate to the job, he or she can be dismissed with less difficulty than a regular employee.

On the other hand, the employer is more willing to train an inexperienced permanent employee than an inexperienced freelance.

Most freelancers have had experience of permanent programming posts. Do you find employers more assiduous in assessing your expertise when being interviewed for a permanent position or for a freelance job?

The increasing proportion of freelancers was graphically illustrated last week at a meeting of the Association of Independent Computer Specialists. More than 120 people turned up to hear about the advantages and disadvantages of freelancing.

What is the reason for this trend? Are permanent programmers simply bored with government-imposed limits on pay rises and see this as a way of getting a sudden jump in salary; or are there other attractions?

Do you get a more interesting variety of work as a freelance, or do you become known as an expert in a certain field and get recruited to an endless stream of identical programming tasks?

There must be a number of interesting technical and personal consequences of transferring from a regular to a freelance life. Programmer Notes hopes that the freelancers among our readers will come forward with some happy and

tion and interface with other IBM software, particularly Vsam and Vsam.

There are also disturbing reports from the US of VSPC abuses bringing down the whole system, or necessitating a deliberate halt to processing.

Such troubles have led at least to two US users, the Centre for Disease Control in Atlanta, Georgia, and Portland General Electric, Oregon, to consider discontinuing VSPC use. The latter installation reported that it used to have daily VSPC failures.

The position had improved, but nine days was still the record time between failures. Efforts to improve it led to operating system enhancement falling behind.

The Centre for Disease Control reported that VSPC was tying up machine resources to the detriment of other users. The way to remedy this was to cancel VSPC. This resulted in the loss of related data, such as APL worksheets, although this was not supposed to happen.

One UK user supported this criticism. The installation, said a spokesman, could live with the increased resource consumption of VSPC if it could control the priority of the system at times when non-VSPC work was more important.

Generally, however, UK users' troubles have not been so severe as those in the US, though the

Vsam and Vsam interface problems seem to apply equally to both countries.

Assessment of IBM's support efficiency varies. One user said that the company had been "very good" at responding to problems, but another thought that the IBM in the UK was comparatively short on VSPC expertise, due to the smaller user community.

## PL/I versus Algol 68 debate

FEW software topics arouse more energetic dispute than the advocacy of one programming language over another. The audience at a debate sponsored by the BCS PL/I specialist group, on December 1, is thus assured of an interesting evening.

The motion for debate will be "Anything PL/I can do, Algol 68 can do better". Prominent advocates of the two languages are expected to speak, though the final line-up has not yet been decided.

Venue is the engineering lecture theatre (Room 508) at University College, Gower Street, London, WC1. Admission is £1, and free Real Ale will be available.

## Communication that's kind to your pocket

**Teletype 43**  
The Teletype 43 is a true, versatile, economic, reliable, what other words can you say, the Teletype 43 is standard.  
For example:  
128 characters line  
Upper/lower case  
100 CPS readable—each character individual digits  
Built-in keyboard with 12 keys  
120 CPS buffer  
Where there is a successful call, there is a fast pay that shows at the printed function.  
All this performance and Teletype 43 is available at a very low price for all applications.  
Find out more about Teletype 43 from:  
Teletype Equipment Division of GADC Ltd  
Trump House, 100, Victoria Road, London W14 8JH

## TECHNICAL SOFTWARE SERVICE FOR MINI'S AND MICRO'S

- Micro Consultants offer a technical software engineering service which covers:
- automatic test systems
  - large industrial data acquisition systems
  - ultra high speed data collection
  - high speed BASIC-like interactive systems
  - specialised FORTRAN or CORAL libraries
  - video control and image analysis

The Software Service operates as part of an integrated engineering organization. Micro Consultants are, therefore, equally able to design and supply:

- micro-processor hardware integrated into a customer's equipment
- specialised arithmetic units
- interface units

Full support by software - AND BY ENGINEERS WHO UNDERSTAND BOTH HARDWARE AND SOFTWARE.

**Micro Consultants Ltd**  
INTERFACE HOUSE, CROYDON ROAD, CATERHAM, SURREY, CR3 6DD, ENGLAND  
Telephone: CATERHAM (08217) 1191

## Computer Marketing

Working with and supported by British manufacturers.

- Newbury Labs low cost British made VDU 7001/2 teletype replacement. 7004/5 sophisticated VDU with block mode trans. Full cursor control, data protect and highlighting. Delivery now from 6/8 weeks. Prices from **£575**
- MSI low cost British made range of cassette data recorders. Teletype compatible. High speed (2400 B.P.S.) Standard serial interfaces. Remote operation. Prices from **£432**
- Midicron 22 low cost, British made Paper Tape Reader Punch. Reads to 150 C.P.S. Punches to 50 C.P.S. standard serial interfaces. 5, 6, 8 level operation. Prices from **£932**
- Computer Marketing EXBIO low cost high speed electro sensing printer. 80, 40 or 20 characters per line. Upper and lower case. Up to 160 C.P.S. standard serial interfaces. Prices from **£699**
- EXBIO model 512 x 16 dot per sec. plotter. Prices from **£965**
- Digital LAS 36 DECimator 30 C.P.S. KSR printer, teletype, Ex Stock. Prices from **£1886**

### COMPUTER WEEKLY

The following special supplement is due to be  
published during

### DECEMBER DECEMBER 8 — ACCESSORIES AND ANCILLARIES

The efficient running of a computer department and the effective use of  
computer output depends to a great extent on the adequacy of the  
ancillary equipment.

Paper supplies, the security system, cleaning equipment, etc., are all  
small but vital factors in machine room housekeeping.

On December 8 Computer Weekly will be taking a look at the computer  
room's vital fringe and some of the new products available

## PEOPLE

## Telephones for deaf from computer centre

CHILDREN at the Royal School for the Deaf in Derby can now use the public telephone system, thanks to the staff of the Derby Post Office Computer Centre.

The Centre's Benevolent Society has donated to the school two phonyphones, which convert into a typed message at the receiving end. The phonyphone is a reconditioned and adapted Post Office telex machine, for which the official UK supplier is the Breakthrough Trust at Wellingborough.

Peter Thomas, former senior sales consultant with ICL, has joined the commercial systems division of Computer Automation as Southern region sales manager.

Other newcomers to the division are Ivon Tozer, previously high-volume product support manager with ICL, who joins as customer support manager; David Mundy, formerly a systems analyst, who becomes systems engineer; and Cheryl Lewis, who was a project administrator with ICL, and who will run the new planning and admin department.

Deaf people can make calls to ordinary telephones through one of the five or six link-up centres throughout the country, and this is particularly important to the children of the Royal School, who come from all over the UK and who can now telephone their parents when they are at school.

The machines can also be used as an internal link between the school buildings, and will help any children to increase their language ability, said the principal.

Richard Forsyth, lately academic programmer at the City of London Polytechnic, has moved to Rair Timshering as software manager. Tony Green has joined Rair Timshering as senior sales engineer for the UK and Europe. He was formerly logistics manager in Cossor's service division.

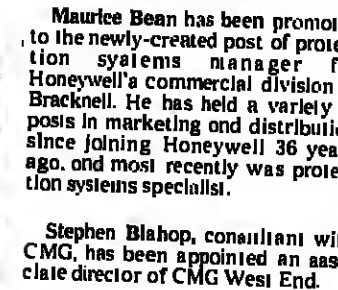

Himalay Bawa

Arvind Bawa has been appointed support engineer with Alkima, and joins the company as leader of the Civil Engineering team. He was formerly with Consulting Engineers Blinnie and Partners. David Himalay also joins Alkima as a support engineer, and will be concerned with the support of ASAS. He was formerly with Hunting Engineering.

Kenneth Walker becomes financial director of Kode. He was previously with Mono Containers as financial director.

Nelson Kila, previously publicity manager for ICL Datasolve, becomes PR manager at BOC Datasolve. Jim Horsley joins Datasolve as publications executive. He was formerly a journalist with Southern Newspapers.

Stephen Blahop

Stephen Blahop, consultant with CMG, has been appointed an associate director of CMG West End.

Pat Muir of Redifon Computers has been promoted from senior systems analyst to Southern branch systems manager, based at Leighton Buzzard. Systems analyst Janet Fooks becomes systems supervisor responsible for the showroom and demonstration capability in Stratton House, London.

Fooks Muir

Dickenson-Standing Barklay

Ian Dickenson-Standing has been appointed managing director of Atlantic Computer Leasing's recently-formed Industrial Leasing Company. Previously he was area manager of the London and Home Counties division of Barclays Bank's Export and Finance Co.

Janet Holliday and Andrew Fowler have joined Pentagram Software Products as programming consultants in the software services division. Holliday was formerly a programmer with Esso, and Fowler was a programmer with Food Securities.

Stephen Berkley has joined Kume in Hayward, California as vice-president, business development, from Politech Corp, also of California, where he was manager of strategic planning.

Dave Lawrence becomes plant manager of Digital Equipment's Any factory. He is replaced as North European region field service manager by John Barrett, previously field service manager for the Northern UK and Ireland.

Nevill Simmons, until recently large systems manager for the East Region with Honeywell's field service, joins Membrain as customer service manager.

Robert Schmittmann, lately of Control Data where he was Los Angeles district sales manager, has gone to ISI as director of North American sales.

## DIARY

NOVEMBER 28  
Proving ideas, strategies, concepts. Edinburgh University Machine Intelligence Research Unit. Home Tower, George Square, Edinburgh, 17.15.

NOVEMBER 28-30  
Managers, databases and information systems conference. IFIP/IAIG, Amsterdam.

NOVEMBER 28-DECEMBER 2  
Automatic testing and IEE/IERF conference. Metropolitan Convention Centre, Brighton.

NOVEMBER 29  
A year's change. Philip Hughes, BCS, ACM Chapter, Polytechnic of Central London, London W1, 18.30.

Electronic security and personal access systems, colloquium, IEE/IERF. The Royal Institution, London W1, 10.00.

A review of do-it-yourself computing. Dr. M. Henley, Institution of Electrical Engineers, IEE, Savoy Place, London WC2.

Development and exploitation of program-based automation, symposium, IEE/IERF. Institution of Mechanical Engineers, London SW1.

Osteo Processing Management Association, West of London to Oxford branch. The Bull, Gerrards Cross, 18.45.

NOVEMBER 30  
Management Education Seminars - Union in the computer room. Tim Webb, Union of Data Processing Managers Association, Monticelli Hotel, London W1, 14.00.

Inaugural meeting, BCS Formal Association of Computing Science Group, University College, London WC1, 14.00.

NOVEMBER 30-DECEMBER 1  
Meeting, IBM Computer Users' Association Local Authorities Group, County Hall, Walsley, Yorks.

DECEMBER 1  
Pattern-based chess knowledge in man and machines. D. Michie, Edinburgh University, MURU James Clerk Maxwell Bldg., University of Edinburgh, 17.15.

Who needs cash anyway? J. M. Large, BCS, Oxford branch, County Council Social Services, Perseus Street, Oxford, 19.45.

Certain what it does and how it works. BCS, Chester and N Wales branch, Queen Hotel, Chester, 19.45.

## Civeware Says

YOU MEAN YOU'D SACRIFICE ME - A MEMBER OF YOUR STAFF.

...ON THE ALTAR OF PROGRESS?

I SEE YOU GET MY POINT!

HELP! HELP! DAMSEL IN DISTRESS!

Anything PL/1 can do, Algol can do better, debate, BSC PL-1 Group, phoning Lecture Theatre, WCL College, London WCL 18.00.

DECEMBER 5  
Big brother is watching you. Obit. Sunet, BCS, East Anglia branch, BOC Quonset, Harlow, 18.00.

Program design. Michael Jackson, Glasgow branch, Daniel Begg's, 19.00.

Recent aspects of machine design. Edinburgh University Machine Intelligence Research Unit, Home Tower, George Square, Edinburgh, 17.15.

DECEMBER 6  
Operations, profession or trade? Walter, Ted Cluff, BCS Openhouse, BOC Quonset, Harlow, 18.00.

Computerised education. R. H. BCS, NW London branch, Railway, 18.00.

Word processing. M. Robins, BCS, Waterbury branch, The Polytechnic, Wolverhampton, 18.00.

Subject selected by speaker. M. Hestline, MP, BCS, Merseyside branch, Adelphi Hotel, Liverpool, 17.00.

A systems approach to information recognition - lecture series. Nader, Machine Intelligence Research Unit, Home Tower, George Square, Edinburgh, 18.00.

DECEMBER 6-7  
General meeting, RT/L User Group, Excelsior Hotel, London W1, 14.00.

DECEMBER 7  
Management Education Seminars - Union in the computer room. Tim Webb, Union of Data Processing Managers Association, Monticelli Hotel, London W1, 14.00.

Exhibition and demonstration of services, products, and information systems. National Data Processing Association, Monticelli Hotel, London W1, 14.00.

Exhibition and demonstration of services, products, and information systems. National Data Processing Association, Monticelli Hotel, London W1, 14.00.

Exhibition and demonstration of services, products, and information systems. National Data Processing Association, Monticelli Hotel, London W1, 14.00.

Exhibition and demonstration of services, products, and information systems. National Data Processing Association, Monticelli Hotel, London W1, 14.00.

## New Molecular system from BCL

IN response to requests from its users, Business Computers (Systems) Ltd has made dynamic program relocation one of the main features of the Molecular Series IV, which it has just introduced. This supersedes the Molecular II and III systems and provides twice as much directly addressable memory in a processor cabinet that occupies half the floor space.

BCL explains that the dynamic program relocation facility has been developed to make more efficient use of main core memory. It enables small pockets of unused core to be used collectively by relocating other programs. This makes the unused spaces contiguous without disturbing the programs already in operation.

The 128K words of directly addressable core memory on the Molecular IV enable 27 programs to be run simultaneously in a multi-programming mode together with the operating system and file control suite.

The reduction in size of the processor cabinet

has been achieved mainly by the use of switched-mode power supplies which generate less heat than older types of power supply.

Other significant new features on the Molecular IV include a real time clock which can measure the run times of programs in order to optimise overall processing time. Terminal operations are made more efficient by a block transfer facility which enables complete screens of data to be transferred to the processor with only one interrupt.

The Molecular IV can handle up to 64 peripherals, including a mixture of 10 and 50 Megabyte drives. These can provide a total disc capacity of 200 Megabytes.

The Molecular IV is totally software compatible with the older Molecular machines and can be supplied with BCL's existing range of accounting packages as well as the Molecular real time multi-programming operating system and the high level language, Management Report Generator.

## Canadians pass privacy laws

LAWS protecting personal information held in both annual and computerised systems have been passed by the Canadian government.

The laws are limited to government organisations but a privacy commissioner, who will be appointed to receive and investigate complaints, will also consider whether the laws should be extended to cover the private sector.

Under the laws, individuals will be able to demand to see information held on them. Exceptions include cases where international relations or national security might be at risk or where the individual could be

harmful by seeing the information.

Individuals must be consulted in writing before data collected for one use is put to another use not connected with the first.

A named minister in each government department will be responsible for ensuring that his department complies with the laws. He must also co-ordinate the collection, storage and use of data to ensure that the unnecessary collection of data is avoided.

He will have to review the use of files so that he can recommend the closing of files that are improperly or infrequently used.

The minister will be first in the firing line from the privacy

commissioner, as he will receive reports of the commissioner's investigations of complaints and have to implement his recommendations or explain why no action is being taken.

## Tory plans for NEB

UNDER a Conservative government the National Enterprise Board will lose its powers to acquire companies, and those organisations in which it already has a share will be sold off. Norman Lamont, an Opposition spokesman on industry, told Computer Weekly that these proposals had been discussed with the NEB.

He added that in its restricted form the board was likely to remain as the State authority that would continue to hold the companies it was unable to sell.

## ICL move on Tesco shelved

A MOVE by ICL to take action against IBM, under EEC regulations, over the terms of the £6 million Tesco order (CW, November 17), appears to have been shelved.

Commenting on the report, an ICL spokesman said, "We have received no indication of legal action by ICL over our proposals

to Tesco. It is IBM policy not to offer discounts or to treat customers preferentially."

Following a meeting at which the companies discussed the matter, IBM said it understood that ICL now considered the matter closed. There has been no comment from ICL.

## Neddy move on UK software

From Front Page

that projections showing the likely numbers of computers to be installed do not consider the effect on jobs. It calls for urgent studies to be carried out as a collaborative effort between the government, management and unions.

The sub-committee's recommendations on education and training follow a survey of 150 computer manufacturers, users and service companies which showed that there was not enough formal training being done, that it was on a very ad hoc basis, and done mainly by manufacturers.

Commenting on the recommendation regarding British minicomputer software, Logica says, "We have no tie-up with any manufacturer. We chose the right hardware for the job. The client's needs have to be the final priority."

A similar view came from Computer Analysts and Professionals, who said that the

grammers, which is 30% owned by the government through the National Enterprise Board systems company, Inac.

Barry May, managing director of UK minicomputer manufacturer Digico, said, "Our kit is pretty well general purpose and such good value for money that a lot of people could use it when they don't want all the facilities provided by US minicomputers. But at the same time it's very easy to put blinkers on and say everyone should buy British."

## BETA refund

A £30,000 refund to members of the British Equipment Trade Association who exhibited at the International Business Show in Birmingham, has been announced by Ron Watson, retiring president of BETA. The rebate comes from a cut in sales charges to members from £27 to £25. Managing director of the Ofrex Group, Andrew Andrews, the new BETA president,

## Optical telephone link 'first'

THE shape of things to come in telecommunications is illustrated by this photograph which compares copper and fibre-optic telephone cables of similar capacity. GTE Telephone and Electronics Corp of Waltham, Massachusetts, claims to have the world's first

optical telephone link following installation of a 24-channel fibre-optic cable between the General Telephone Company of California's long-distance switching centre in Long Beach and the local exchange building at Artole, 5.6 miles away.

Voice signals are first digitised and then transmitted to a light emitting diode attached to the optical cable. Once they have travelled 1.6 miles, they reach a repeater in which they are reconverted into electrical pulses which in turn stimulate a second light-emitting diode. They pass through a second repeater before they reach the other end of the link, where they are reconverted by a photo-detector into ordinary electrical signals.

The prime advantage of optical over electrical telecommunications is the enormously greater traffic capacity of comparably sized cables. This means that optical cables can be inserted into existing cable ducts in cities without major disruption in the streets.

The limitations at present lie in the short lives of the light emitting elements and the number of repeaters needed. In the UK, STC's optical fibre developments are at a comparable stage to those of GTE (CW, November 18).

## Miproc 16-AS, micropower to give you high speed faster.

Internationally acclaimed Miproc-16 with a compute-rate of 2.8 million instructions per second is the fastest 16-bit microcomputer card family available.

Now, supplied with an OEM chassis package, Miproc-16 is brought into action even more quickly.

The businesslike application system, named Miproc-16-AS, has room for one, two or even three Miproc-16-CPU's. Smartly styled and equipped with add-in 13-slot card bay modules, fans and power supply, this new OEM chassis package eases the way into high speed microcomputing.

## Instruction Power

Up to 170 instructions including multiply/divide and bit manipulation give Miproc-16 formidable processing capability.

## 16-bit Power

16-bit program words make programming easy; 16-bit data words maintain high precision in arithmetic operations.

## Addressing Power

16-bit dual memory architecture gives 65k words of directly addressable program memory and 65k words of data memory with 8 powerful address modes.

## Interrupt Power

Multilevel, priority vectored interrupt system handles context changes in less than 2 microseconds.

## I/O Power

256 directly addressable I/O channels with data I/O rates of up to 1.7 megabytes/sec. under program control, and up to 20 megabytes/sec. for DMA.

## High Speed Processing Power

The unique dual memory architecture combines with high speed Schottky TTL technology to execute most instructions in a single 350 nanosecond machine cycle.

## Software Power

Easy to use cross-assemblers for mainframe or minicomputer make programming faster, and PL/MPC, a super-efficient high level assembly language.

## Hardware Power

Comprehensive range of processor, memory and I/O cards backed up by sophisticated hardware development aids.

## Ruggedized Power

Miproc can be configured to meet any known military specification.

Miproc is a registered trademark.

## COMPUTER WEEKLY presents a special one-day conference Solving the computer staff problem

The Cafe Royal, Regent Street, London Thursday, January 19th, 1978

**Objectives:**  
To provide DP Managers and Personnel Officers of firms using computers with an overview of current practice in the recruitment of computer staff.

Shortage of computer staff is a problem which faces all computer users. A lack of qualified personnel is exacerbated by the mobility of computer people and their apparent loyalty to the job rather than the organisation.

In these circumstances recruiting suitable staff poses particular problems: How does the user set out to attract staff? How does he advertise effectively? How does he manage the selection process? Should he use a recruitment agency? Is the use of contract staff a viable solution?

The seminar will seek to answer these questions and to indicate what the computer user should do in order to formulate a successful recruitment policy.

## Session 1

Introduction: The computer scene and computer people. Who are they? What are their characteristics? How are they motivated? Can supply ever catch up with demand?

## Session 2:

The user's viewpoint: Finding a way through the recruitment jungle. How can the computer user effectively obtain the staff he needs? How should he set about recruiting staff? What are the pitfalls? Planning staff recruitment and development rather than reacting to crisis situations.

## Session 3:

The role of the recruitment agency: Identifying users' staff requirements. Specifying the post. Drafting the advertisement. Vetting the candidates. Giving the user the benefit of specialist knowledge of the job market.

## Session 4:

The NCC Job Selection Service. Systematic tests to assess applicants' qualities can provide a standardised basis for selection when compared with national norms - thus providing a useful aid in the selection process.

## Session 5:

How to advertise for computer staff. Specifying the job and the working environment. Writing the advertisement. Adopting a creative approach to job advertising. Media selection. Mass mailing requirements.

## Session 6:

The OP Manager: Picking the right man for the most responsible job in the computer dept. Favor in number than other categories of computer staff, good OP Managers are worth their weight in gold. The post demands a more generalist, less specialist approach than programming and systems analysis. Spotting those with potential requires a keen eye and a wide ranging knowledge of the business. Filling this key post is a task for a reputable recruitment bureau.

## Session 7:

Contract Staff: Increasingly contract staff are being used to overcome work bottlenecks, help in conversion programmes, etc. as well as compensating for variations in staff availability due to holidays and sickness. Now the use of contract staff is such a well-established feature of the computer scene that it merits inclusion in an overall appraisal of the recruitment problem.

## Session 8:

The speakers will include Tony Miller of Furness Witby, David Payne of Tesco, John Wood of EMS, George Penney of the NCC, John Goldsmith, Ian Humphries of Knight Computer Services and Neville John of OGC, chairman of the FCSA Recruitment Division.

## Siemens in joint venture with AMD

THE joint venture company formed recently by Siemens and Advanced Micro Devices (AMD) may still lack a name to operate under, but is not without plans.

Two facilities are to be established, one in Sunnyvale, California, and the other in Munich, West Germany. Each will be located close to its respective parent company to draw on its expertise when necessary, and their first task will be in development work for the microcomputer systems, systems components and software products it plans to introduce.

As both Siemens and AMD hold Intel second source agreements, the early products of the new company will undoubtedly be based on 8080 processor devices, but as both parents are also integrated circuit manufacturers there are plans for greater collaboration in the future, including joint IC developments.

The joint venture follows Siemens taking a 17 per cent share stake in AMD for \$22.5 million. The share price, \$45 each, was established by monitoring the market price for AMD over a period of 90 days before closing the deal. This left Siemens paying an actual 65 per cent premium for the shares, as they fell after the deal was closed.

To be headed by AMD president, Gerry Sanders, the joint company has an equity of \$5 million, and is 60 per cent owned by Siemens. In addition, the Germans have put in a further capital of \$3 million.

### Portable machine

A PORTABLE 16-bit microcomputer configured around the new half-card digital equipment LSI-11/2 should be available early next year from Gamma Telecommunications of Wokingham which represents the US firm, General Robotics of Hartford, Wisconsin.

The portable machine will be able to run DEC's PDP-11 systems software. A range of microcomputers based on the LSI-11 will be introduced early next year by Heston of Gloucester (CW, July 21).

## Intel to cut prices with new devices

INTEL is launching a dual attack on the microcomputer market, with the announcement that the 8086, 16-bit device will commence customer sampling during the first quarter of next year, and the news that savage price cuts, coupled with new introductions, are being made in the single chip, 8-bit market.

The 8086 is software and peripheral compatible with both the 8080 and 8085, 8-bit processor families, although to obtain the best results from the part, code translation will be required. This will give a throughput increase of between 10 and 15 times the 8080, which the company claims will give it a similar processing capability to the PDP-11/45. Without code translation, throughput will be increased only around 5 times.

The part will also have an increased, but unspecified, instruction set, which will include some compiler statements to which the CPU will respond directly. To accommodate these, a new version of Intel's PL/M

high level language is being prepared, to be known as PL/M 86. It will not employ memory to memory architecture, using registers instead.

Peripheral compatibility is attained by designing the part around the 8085 I/O bus, though the key to this may well be the use of the new 8089 I/O processor device, which is not scheduled to appear until the third quarter of 1978. This will link 8080 peripherals and the MCS-86, the microcomputer system is based on the 8086 processor. The address capability will be a maximum of 1 Mbyte, and 50 nanosecond memory devices can be worked directly.

Software and hardware development will be possible on the existing MDS-800 development system, and a range of SBC-86 single board computer assemblies will be available. These are virtually the same as the SBC-80 boards, and are basically just awaiting the arrival of the processor.

In common with the 8080 and 8085 processors, the 8086 will be able to use Intel's Multibus bus structure which, with 5MHz operation, will allow the construction of a multiprocessing system incorporating up to 16 master processor boards, in any combination of the 8080, 8085 and 8086.

As a derivation of the 8086, Intel will also be introducing the 8088 part during the third quarter, which will have a similar 16-bit internal configuration to the 8086, while having an 8-bit external data bus.

In the single chip microcomputer market, where the majority of use is found in high volume industrial and consumer control applications, the company is launching a two-fold attack, combining savage price cuts on some products with the introduction of new devices.

From the small to medium scale user, categorised as an annual consumption of up to 10,000

units, there is a growing trend to use the 8748 EPROM version of the 8048 microcomputer in a production role. Designed as a development tool using EPROM memory rather than mask ROM, the device has found increased use with companies having several small volume applications for the one device where its increased cost can be added off against mask generation costs for the ROM on an 8048. In consequence, Intel has cut the 100 up quantity price from £200 down to between £20 and £30, depending on variant.

The pricing on Intel's EPROMs has also been chopped, with the 2716, 2K by 8 bit now down to £27.40, the 2764, 1K by 8 bit to £12.50 and the 2768, 1K by 8 bit to £13.70 - all in quantities of 100 up.

The new introductions are aimed at taking the company a step nearer its goal of achieving a single chip "system" rather than single chip computer for control applications. The first is the 8021 processor, the first in a series, housed in a 28-pin, rather than a 40-pin, package.

The main difference is that the 8046's capability for expansion to off-chip data memory has been removed, leaving it with the on-board 1K byte ROM and 64 byte RAM only. Input/output lines have also been trimmed down to 21 lines. Intended specifically for consumer control applications, it features a pin as a zero crossing detector together with two high voltage drivers. In quantities of 10,000 the device will be priced at £1.

Spreading in the other direction from the 8021, the second introduction is an upgrade of the 8048 device. Known as the 8048S, this features 2K bytes of ROM, 128 bytes of RAM, and has a 10MHz clock frequency. This gives the device an instruction cycle time of around 1.5 microseconds, and a two-time speed improvement is planned.

## ONLINE SYSTEMS

# Terminals will be as familiar as telephones

By H. Holman Hunt

THE forecast figure on terminal population, produced last year by Pictel for the Eurodata Study, shows that by 1985 some two million terminals will be installed in Europe. In the UK, the figure on a conservative estimate, is expected to be 400,000. Of course, part of this huge growth in terminal population can be aligned to the growth of the computer industry as a whole but the terminal figures are proportionately so much higher than those for mainframes and other equipment that the reasons bear some examination.

In order to do this, it is interesting to return to the Eurodata Study and examine the way in which these forecasts break down for major industries, looking not at increases in existing applications but at the new applications which are appearing on the horizon.

It has widely been predicted that, during the 80s, a deep and fundamental change will take place in industrially developed society. This stance is argued cogently by Harvard sociologist, Daniel Bell, in his book "The Coming of Post-Industrial Society", where he claims that our basic resource of the 80s will be knowledge and not raw materials; information and not energy. Thus, we stand on the threshold of a major transition in basic social structure which will have a far reaching effect upon the computer and telecommunications industry on which, inevitably, will fall the responsibility of managing this vital resource.

The predicted growth of the information industry will, of necessity, lead to the growth of online systems, as both the number of databanks and the users needing to access information from them, grows. This growth in the number of online information systems will be paralleled by a growth in the size of such networks, as efforts are made to spread the high cost of their development over a large number of users.

Eurodata, the scientific and technical information service developed by the Commission of the European Communities, provides a symbolic focal point for this type of network and it is likely that, as Eurodata goes live next year, it will increase awareness of information at all levels throughout Europe.

At the other end of the scale, information networks on specific commercial subjects are springing up throughout individual countries. Here in the UK we already have systems for stockbrokers to access information on the market, for insurance brokers to find out the

"Betch is a bitch" was the startling advertisement slogan recently used by Deta General. And never was a truer phrase coined by an advertising copywriter.

Betch processing was the curse of the early computer implementations and the cause of much of the bad reputation which caused the computer slump of the early seventies.

It is self-evident now that online systems are the answer to so many user needs, although there are still some bulk processing applications where betch has its role.

This supplement looks at some online applications and the terminals available. In this opening article, H. Holman Hunt, managing director of Pictel, puts the online revolution into a wider social context, looking to the future and the way in which online terminals could affect the home and work environments.

He foresees a future in which computer networks will crisscross the country in the same way that the national grid does now, and the computer terminal will become as familiar to the general public as the well-known online terminal, the telephone.

end of each check-out line. These, in turn, are linked to a computer either in individual stores or at group headquarters. The scanner reads the price and other details from the bar-code on the package while the intelligent terminal computes the bill, gives the customer change and, by sending the details of the purchase down the line to the computer, amends stock records and deals with the accounting function.

Now that the EEC has decided upon the form of the European version of the product code and the manufacturers have adapted equipment to cope with the changes made necessary by differing currencies, it cannot be long before such systems will start appearing throughout the UK.

It is also likely that future trends in online systems will provide a link between the retail and banking sectors before long. A recent study of Electronic Funds Transfer Systems predicts a massive growth in three major types of banking automation terminals; online teller terminals, automated teller machines and point-of-sale devices.

While the first of these, DLTs, are located at a teller window in a bank and provide real time access to a customer file; and the second, ATMs, perform the same function but do so automatically and can, therefore, be located outside a conventional bank; the PoS terminals are located directly in a store or supermarket. These devices perform check verification, credit or instantaneous funds transfer without currency or cheques actually changing hands and the transactions are accomplished when the customer presents a magnetically coded plastic card.

The concept of a computer terminal in every home is less futuristic than might be supposed since the teletext-adapted television set is really nothing less than a receive-only terminal. The large manufacturers plan to launch these sets at the Audio Fair next year and prototypes are already being demonstrated in several shops.

Once the Viewdata network has been established and the vast majority of houses are equipped with teletext TV sets, there is no reason, apart from long, a recent study of Electronic Funds Transfer Systems predicts a massive growth in three major types of banking automation terminals; online teller terminals, automated teller machines and point-of-sale devices.

While the first of these, DLTs, are located at a teller window in a bank and provide real time access to a customer file; and the second, ATMs, perform the same function but do so automatically and can, therefore, be located outside a conventional bank; the PoS terminals are located directly in a store or supermarket. These devices perform check verification, credit or instantaneous funds transfer without currency or cheques actually changing hands and the transactions are accomplished when the customer presents a magnetically coded plastic card.

Thua, unless there is a major and unforeseen change in the way industry is moving, networks will crisscross the country in the same way that the national grid does now, and the computer terminal will become as familiar to the general public as the telephone.

fore, be located outside a conventional bank; the PoS terminals are located directly in a store or supermarket. H. Holman Hunt, managing director of Pictel, has been with PA since 1962, and in 1968 he set up a computer consultancy service within PA which has grown under his leadership to become a group of experienced professionals organised in three categories: Computer Consulting Division, Software Division and Operational Research Division. These divisions now constitute Pictel UK.

Holman Hunt is a Fellow of the Institute of Administrative Management, the British Computer Society and is a fellow and Past President of the Institute of Management Consultants.

## ON SHOW AT SYSTEMS '77...

Whatever your field of activity or your application, the Megadata "System 700" is adaptable to your needs, and ensures full compatibility with already existing equipment, thus considerably improving the systems overall efficiency.

## Instruction manual

THE fifth in a series of instruction manuals on the RCA CDP 1802 microprocessor which covers the use of the Cosmac Software Development Package has been published.

The package is an interactive aid for developing and checking programs for the microprocessor, with facilities that include a cross-assembler, an error checking simulator and a range of debugging tools.

Designated MPM-202, the manual reviews the architecture, organisation, and operation of the processor and describes the two levels of assembly language. It also provides detailed coverage of the CSDP constituents.

The 88-page manual is available from RCA's sales office in Sunbury-on-Thames.

# First edition

Something unforgettable has happened to DEC's LSI-11 and PDP 11/03 computers.

It's the new Intel In-1611 Add In Memory system. Featuring a standard 2 wide printed circuit card up to eight times more dense than DEC's own memory system, the In-1611 represents a real advance in design and economy.

Available ex-stock from Rapid Recall, the In-1611 is available in 8, 16, 24 and 32K models - all with access times of less than 450 nanoseconds. And all units are directly compatible with the DEC systems.

For immediate off the shelf delivery of any In-1611 unit - or for more information get in touch with Rapid Recall (tel: 01 379 6741).

Also available - In-4711 series.

This plug-in memory module provides 16K words plus parity on a single card and occupies only a single PDP-11 card slot. The In-4711 can be used with the PDP-11/04, 11/05, 11/10, 11/34, 11/35, 11/40, 11/45 and 11/50.

The new Intel In-1611 Add In Memory.

pocket sized

intel

## More 4014 options

THREE enhancement options are to be introduced next year by Tektronix for its 4014 video terminal. Each will be based on a Motorola 6800 microprocessor, and up to 32K bytes of RAM.

The minimum enhancement, known as Option 40, equips the terminal with a programmable keyboard, display scrolling and new communications parameters for use with a host computer that takes account of the limited intelligence being included.

The second stage, known as Option 41, adds to Option 40, facilities for graphics location, scaling and rotation, plus symbol generation. Both options are expected to be available by the

end of January, and will be followed at a later date by the third enhancement, Option 42, which will add graphics refresh, with dragging facilities.

The Option 41 enhancement should find a ready market in several sectors of engineering design activity, for the programmable keyboard and symbol generation facilities can be combined to provide complex symbols assigned to a particular key. This is particularly useful where repeated use of that symbol is required, as in applications such as electronic circuit design.

With 32K bytes of memory installed, up to 10K vectors can be accommodated for graphics or symbol generation purposes.

## Range of I/O boards

DATA acquisition and analogue output boards that are compatible with a wide range of microcomputers have been introduced by Analog Devices. Each board in the range has been designed to emulate the functional, mechanical and electrical parameters of counterparts produced by Texas Instruments, Pro-Log, Intel, Motorola and National Semiconductor.

The boards offer a variety of functions, ranging from multiple input data acquisition and multiple analogue outputs, to providing a combination of these. A total of nine boards have so far been introduced by Analog Devices, and further additions are planned. For the Pro-Log 4 and 8 bit microcomputers, the

current range includes a 16 channel data acquisition board and a 4-channel analogue output board, for the Intel SBC80, MDS and the National BLC 80 microcomputer families there is a 2 or 4 channel, 12-bit analogue output board and a 16 channel, 12 bit data acquisition board.

Three boards are available for use with the Motorola 6800 series, these being a 10-channel, high speed analogue input board, a 4-channel analogue output board and a complete 16-channel I/O subsystem. Finally, for the Texas Instruments TMS9900/0100 microcomputer there is a data acquisition board and an analogue output board.

## Whatever your application, DELTA have a display system to suit you

**DELTA 4000**  
Our standard terminal which gives you full editing facilities, paging, synch/asynch transmission and programmable function keys within the long list of standard features.

**DELTA 4050**  
The data communications terminal designed for multi-drop networks. Proven replacements for BURROUGHS.

HONEYWELL and UNIVAC displays. Includes Line Monitor for affoliant system debugging and troubleshooting.

**DELTA 4300**  
Our Text Processing terminal which includes automatic Ragged Right Justification, powerful search and replace facilities and up to 8.5K characters of display memory in its comprehensive features list.

**DELTA 4500**  
Full user programmability makes the 4500 ideal for "intelligent" terminal applications and for the development of customised display programs.

**DELTA 4700**  
Our floppy disc-based terminal system which gives total flexibility for information retrieval and word processing applications. Up to 1.5Mb of local storage all packaged in an attractive workstation.

**Rapid Recall**

Available ex-stock from Rapid Recall, the In-1611 is available in 8, 16, 24 and 32K models - all with access times of less than 450 nanoseconds. And all units are directly compatible with the DEC systems.

For immediate off the shelf delivery of any In-1611 unit - or for more information get in touch with Rapid Recall (tel: 01 379 6741).

Also available - In-4711 series.

This plug-in memory module provides 16K words plus parity on a single card and occupies only a single PDP-11 card slot. The In-4711 can be used with the PDP-11/04, 11/05, 11/10, 11/34, 11/35, 11/40, 11/45 and 11/50.

The new Intel In-1611 Add In Memory.

# More users turn to online working

THE punched card is dead — long live the online terminal! It isn't quite as dramatic as that, but visitors to this year's Compec, for example, were left in no doubt that the terminal is by far the most important peripheral product, and that more and more users are turning to online working for data entry, program development and transaction processing.

For the DP manager with strong enough nerves to handle the development of online, terminal-handling software, the benefits are many. Program statements can be entered more quickly through a screen, and verification is practically automatic. Many users find that programs input in this way, for example, are 100% accurate — a level of accuracy rarely

**RICHARD MILTON** says that this month's Compec left visitors to Wembley in no doubt that the terminal is by far the most important peripheral product, and that more and more users are turning to online working for data entry, program develop-

ment and transaction processing. Here he describes some of the benefits which await the DP manager with strong enough nerves to handle the development of online, terminal-handling software and outlines recent hardware innovations.

achieved with either card or magnetic tape input. Programs can also be altered much more easily on a screen, and this is a facility which is particularly useful where a number of similar programs have to be produced, varying in some details. It is even possible to write small programs while sitting at the screen.

The reference to the demise of the punched card is, of course, premature to say the least. And if anything, the online terminal

has given this method of data entry a new lease of life as far as jobs like file creation are concerned.

Just what kind of terminal the user will go for depends, of course, on the speed and throughput of his application and on how time critical it is. In the past, remote job entry was a popular way of getting more "mileage" out of an existing mainframe. But the increased price-performance of minis have made them the first choice of

many users for dedicated applications and the RJE terminal is losing favour in some quarters. Remote job entry tends now to be offered as merely one facility among others on the new breed of intelligent terminal.

The microprocessor has meant that greater intelligence in new terminal products is almost de rigueur and the current generation of products pack the power of a respectable mini. Aside from purely technical developments, though, there are

a number of market forces pushing display terminals into prominence.

The minicomputer manufacturers have identified the VDU as their biggest selling asset. Ease of program development and data entry, and the immediate impact on the prospective customer of transactions conducted on the screen have contributed, in no small measure, to the mini's appeal and its success in traditional mainframe markets. This has resulted in the mainframe makers themselves (notably IBM, ICL, Univac and NCR) pushing the benefits of online terminal-oriented systems.

Not only the mainframe manufacturers have responded to the challenge of the mini firms. Baric, for instance, recently introduced its Datacare service, in which the user buys an ICL 1500 online terminal as part of a package of bureau services.

Many new ranges of terminals have appeared in recent weeks. ITT business systems, which has been active in the market for some time with an IBM-compatible system, the 3280, has now launched a new video terminal, the 3230, and an intelligent terminal system, the 3230. Hazeltine, following a general trend to cheaper terminals, has launched its H 1500 low price family of VDUs with a one-off price of £800.

Colour has yet to catch on in a big way as far as the professional user market is concerned, but Reading-Husel Crow has launched several models capable of displaying in high resolution and full colour. The company also produces screens with built in teletext facilities to receive Celex and Oracle.

Also active in the colour field is a newly formed division of Gresham Lion which has produced two colour information display systems aimed at applications such as satellite, radar and X-ray scanner pictures.

Also at the low-cost end of the range is the 1200 VDU range of terminals introduced by Perkin-Elmer. Aimed at transaction processing applications, the 1200 includes editing facilities and simplified host computer programming and sells in quantity for £1,100.

Graphics remain a minority interest, but the market is at least active enough for one of the major manufacturers in this field — Tektronix — to have launched two new graphics displays. The GMA 101A and 102A are designed to allow users to do some tailoring to their own needs, but are aimed basically at applications like printed circuit layout, document preparation using different fonts, and high resolution scientific work.

One "all-singing, all-dancing" terminal of interest is the new Diablo 1841 which can act as a communications terminal compatible with IBM's 2741, or can be used in an APL application, and which also has a sufficiently sophisticated graphics capability to enable it to print out music.

Probably the most interesting technical development, and one which may well catch on in a big way in future, is the hand-held or portable terminal. These are not too thick on the ground at present, but promise exciting things. Data Recognition has developed a portable data capture device called Dataport 3 which can be used both to store and to retrieve data and so communicate with a host mainframe.

Data Recognition's portable terminal, Dataport 3, in use for inventory control. Micros memo that terminal is growing smaller.

Built around a 18-bit microprocessor, the device can store up to 20K characters in a removable cassette. It has a search facility to retrieve display data on a 18-character alphanumeric display and also transmit data to a mainframe via telephone line, up to 2400 baud.

The manufacturer says the device is aimed at applications such as stock control, where warehouse staff can, for inventory control and by people such as sub-representatives who could transmit orders from the premises using an ac-coupler.

The portable terminal is interesting because it immediately brings to mind the concept of the electronic calculator — a lesson which will be appreciated in the minds of electronics manufacturers — only has the microprocessor provided the technical means to construct cheap, pocket-terminals, but major forces are at work pushing manufacturers to use this technology.

By next year, numerical-text services will be available to the public — services such as Viewdata, Ceefax and Oracle. Initially, these services are concerned only with the gathering of information and news, but many other services are planned to follow.

When the domestic television, becomes essentially a "transaction centre" in the home, the day of the domestic video terminal will have arrived. Another driving force is the personal computer. Although some four personal computers systems are on offer to enthusiasts, the cheapest of these is no more than £800. Such systems convert the domestic TV receiver into a data terminal by means of a plug-in microprocessor. In most cases the same way that a game can be converted into a game machine.

Many sceptics believe that the average domestic computer simply does not have the potential to engage in personal computing. Yet the cheques are rolling into the field. And with the calculators and digital watches — with results that can be seen in every high-tech machine.

It is likely that within two or three years the semiconductor manufacturers will have produced a solid state microprocessor, to replace the silicon chip. This will be a ray of hope for the microprocessor, which will be able to communicate with a host mainframe.

The choice of terminals is usually dictated by the applica-

# All you need at push of a button...

By Richard Creer

SO it has been decided at last, for reasons practical, political or emotional, that your installation is going to have an online system. After years of happily punching cards and printing paper at the central computer department, it is at last effective for the people in sales and marketing, personnel, the leading bay and the boardroom, to get the information they need at the push of a button.

No more forms to fill in, errors to correct, hundreds of pages of sub-totals to wade through just to find the figure they want. Simply type in the right code on the friendly little TV screen and bingo! The answer appears as if by magic. Isn't technology wonderful?

But, of course, it isn't magic at all. The information that someone wants is stored away on a record in a disc file in a remote corner of the computer room. Between that record and the shop floor a long and tenuous chain of hardware and software must be planned, installed and tested. What's more, each link in this chain must be highly reliable.

Failure in the overnight run of a batch system can, with luck, be recovered from in time to prevent it from having an adverse effect on company operations. Failure in an online system is immediately apparent — when you press the enter key and nothing happens. The result is one frustrated and unhappy clerk and a DP manager looking for an explanation.

As a first time user, you will have no practical experience of building this chain, but you will presumably have acquired a good deal of theoretical knowledge from various courses and seminars attended. Your confidence will also, no doubt, be bolstered by the fact that many have taken this path before and succeeded, although you may still have a few lingering misgivings about the whole scheme, caused by stories of other people's expensive and embarrassing failures.

What can be done to maximise the chances of your first online implementation being a success? One of the most important factors is the selection of the initial application. Ideally, it should be one that requires a minimum of system design and programming effort, a complex restart or recovery facilities and one where system reliability, though desirable, is not of paramount importance. It would also be of considerable advantage if the delivery date for the system were not critical.

What kind of application fulfils these requirements? None better than a straight forward inquiry on an existing master file. Such an application embodies most of the fundamental features of all online systems — direct file access, operator communications, rapid response — but without the multitude of complications that can arise from real time file updating. Also, since the user already has some means of interrogating the master file via batch systems, there should be less pressure on the online development team to "come up with the goods" and there will be something to fall back on should troubles strike during the "running-in" period.

The choice of terminals is usually dictated by the applica-

tion, the amount of money available or some combination of the two. Most people are impressed by the speed, clarity and ease of use of the expensive visual display unit, but for many applications they are either unnecessary or inappropriate and there is still plenty of scope for a good typewriter. Whatever variety you select there is bound to be a wide choice of models from a number of manufacturers and a corresponding wide range of prices.

Perhaps the safest bet for the first time user is to choose the one advocated by his mainframe supplier, even if it is the most expensive, thereby procuring plenty of "free" assistance while installing the online system. You can always consider a cheaper and/or more reliable model later and this should serve to keep the giant on his toes.

When it comes to selecting that other essential piece of teleprocessing hardware — the telephone line — the choice for most of us is considerably more restricted. All I can advise is order early.

Having sketched out your hardware plans, it is time to turn your attention to software needed to support it. Here again products are proliferating and there are several good teleprocessing monitors on the market, all proclaiming their relative merits in the areas of price, performance, reliability and so on. You can perhaps narrow down the field by discarding those which do not support your particular choice of hardware.

If you already have a database, you will probably want to have online access to it, if not immediately then at some later stage of development. "Bridges" have been built in various directions between some of the database packages and some of the teleprocessing monitors, so the availability of such a link is an additional selection criterion.

A word of warning though — make sure that the bridge is actually installed and working somewhere, rather than just "planned", or you may find yourself helping with its construction.

Other less tangible factors that should be taken into account include the availability and quality of training for your current programmers and analysts and the size of the pool of experienced people from which you may want to recruit new staff. The latter is roughly proportional to the number of existing users, and there are some pretty convincing arguments for selecting one of the more popular online packages.

If you don't already have a database but plan to install one, then the arguments presented above would, of course, still apply but in reverse — choose a product that has been proved to work well with your TP monitor. Whatever the attractions of these two items of software are when considered individually, they will be found to be far outweighed by the advantages of having them work well together.

Staffing your first online application may present some difficulties. Unless you have been particularly fortunate in your recent recruitment programme you are unlikely to have much in the way of in-house skill. Training existing staff in the new techniques required and

drafting in outside expertise, either permanently or temporarily, should produce a balanced team. By working with people who have "done it before", those with no previous experience will certainly learn more rapidly than through any amount of trial and error.

Having assembled, or at least planned the assembly of, all the necessary hardware, software and personnel components, you are now in a position to embark on the system design and programming. For reasons which are often difficult to identify, these processes tend to take far longer than would be expected. Parallels with batch systems of superficially similar

complexity seldom seem to hold true and progress, particularly in the early stages, is frequently exasperatingly slow as various system design blind alleys are explored.

Certainly the dictum that "when you start writing online programs, 80% of your batch programming experience becomes redundant" seems to be correct. While that missing 80% is being learnt, much time and money can be expended on unsound system design and programming strategies. This is one area where expert advice can help you avoid most of the pitfalls.

One aspect which is often given too little emphasis when

designing systems, both batch and online, is the specification of performance criteria. In a batch environment, poor system design can, and often does, significantly increase the processing time. This may or may not be important depending on factors such as how often the application is run, and how much spare computing capacity you have.

The user need never know that a job which started at midnight ended at four in the

Richard Creer, who has eight years' data processing experience, six of these on teleprocessing systems both in this country and the US — discusses here what can be done to maximise the chances of your first online implementation being a success.

Creer specialises in database systems on IBM hardware, and has spent the last two years providing advice and practical assistance to TP users as an independent consultant. Recently he formed Circle Computer Consultants Ltd with four other previously independent TP consultants.

morning instead of two. But in an online environment doubling the processing time is immediately apparent as an unacceptably long response time at the terminal. Fifteen seconds may not seem long if you are working at a desk, but it can feel like eternity when you are sitting in front of a terminal.

So, it is a good idea to establish an upper limit for system response, to bear this

## Most people already have a Reality user's manual

Reality understands English. So the obvious place to find the right words for Reality is an English dictionary. Choose the most useful words: check, sort, list, control, inventory, value, together with those particularly associated with your type of business. It's as simple as that.

Reality is a computer-based data management system which stores centrally all data required for an operation (business, factory, warehouse, accounts department) and allows anyone interested — not just data processing professionals — to access and update files whenever necessary using an easy to operate TV-type screen or printer.

What's more Reality can be used wherever the work is being done. And as many enquiries can be made simultaneously as there are terminals on the system — providing the security password is tapped in first.

## If you can speak English then Reality will answer back

However, Reality understands more than just English. For the EDP specialist it copes with high level application-oriented languages such as DATA/BASIC or RPG11.

And there is the useful PROC — a job control language which enables a whole series of operations to be originated with a single command.

Sales Order Entry, Stock Control, Accounting, Production Scheduling, Inventory, Sales Records, Payroll, Credit Control... Reality can look after all these business manoeuvres and many, many more.

If you're interested in saving costs and increasing efficiency then fill in the coupon below or phone 0442 61266 Ext 202 for more information and an opportunity to see Reality in action.

**REALITY from CMC**

Please send for my attention on the Reality business system.

I would like to see a demonstration of Reality.

## ONLINE SYSTEMS

# The solution to an advertising problem

By Laura Tatham

ALMOST all the activities of an advertising agency that are not directly creative generate a mass of paperwork that is complex, volatile and highly time-dependent. It therefore seems strange that although many agencies use batch computing, only a handful have yet exploited the possibility of online computing.

Occasionally this omission may be due to ignorance. More often it is the inability to afford an in-house system of any kind. Fewer agencies still could find the resources to develop, operate and maintain an online system which, to be fully cost-effective, would probably be too elaborate for a minicomputer to handle.

Several agencies in London, however, have found that a comprehensive online service known as Medline provided by

Donovan Data Systems provides a highly satisfactory solution to this problem.

Donovan is an independent bureau company with clients in North and South America, two European countries and the UK. The bureau service is a unique of its kind in the UK and is dedicated to the work of advertising agencies and, to a lesser degree, market research agencies.

Situated in Mayfair, London, Donovan's computer centre is equipped with an IBM 370/135 with 500K bytes of main store and front-ended by an IBM 3704. At present a total of 22 video terminals, split roughly equally between IBM 3270s and ITT 3280s, are linked to the system, all but two being in users' offices.

This total will reach 30 by the end of December, and by April

1978 it will be 42, says Roy Tinker, vice president and UK general manager, who is also planning to upgrade the mainframe to a 370/138 by the end of next year.

In casting in their lot with Donovan, London advertising agencies, such as J. Walter Thompson, French Gold Abbott Kenyon & Eckhardt, and BBDO, etc., are following the American example, where more and more agencies are closing down their in-house installations. Some 30 of them, including 15 of the top 20, are Donovan clients, using nearly 300 video terminals and a countrywide data communications network.

The non-creative activities of advertising agencies can be

summarised under three broad headings. First is campaign planning. This involves selecting the media which, in the agency's judgment, will give the client's message the most effective impact, subject to budgetary limits and other constraints such as the need to co-ordinate with a new product launch.

How many media are relevant obviously depends to some extent on the nature of the product or service. Nevertheless, the list of possibilities runs into hundreds and the total available into thousands. The structure of charges for advertising is also far more complex than a layman might suppose. Rates will differ, for instance, according to position in a

publication or time-slot on the air, the size of space or amount of time required and whether a single ad or a series is booked. Though final decisions must, of course, depend upon skill and judgment and cost alternative schedules are obviously of considerable value.

Secondly, there is the recording of the selected bookings which is also the basis for client and other accounting. In the advertising business, cancellations and changes are frequent due to factors varying from second (or third or fourth) thoughts on clients' part to feedback after a campaign has begun. The problem is therefore similar in the nature to that faced in airline seat reservation. Thirdly, because advertising is fiercely competitive, and clients expect it, the agency must be in a position to quantify the effectiveness of its work. For its own good health, it must also be able to assess the profitability of its clients.

It is easy for the computer-minded to see, — though it is only recently becoming apparent to British advertising agencies — that online operation is the perfect answer in this environment. It is equally clear after talking to Tinker why it is economically impossible for most agencies, if only on the grounds of cost, to build and operate their own systems.

Integration of the records used by the various departments of the agency is necessary, not only in the interests of accuracy and consistency, but to obviate repeated data entry. A large database must be designed, maintained and constantly updated. The program for media scheduling is large and sophisticated and the transaction processing software complex. Donovan's US parent, which initially develops software (though modifications are made locally to suit varying national practices and there is a two-way exchange of ideas) allocated some \$600,000 in 1977 alone for program development and maintenance.

Another factor that militates against this individual user is the need for constant system availability. Over 25% of Donovan's software is oriented towards recovery. As a result, the worst that can possibly happen to a client is to lose a few hours' input. A further safeguard is a standby arrangement with a user of a similar configuration.

A useful device in this connection is the ability to call onto a computer centre video terminal (which is constantly attended) an identical display to that currently shown on a user's screen. This facility, in conjunction with a telephone conversation, helps users sort out problems that arise.

As befits the servant of a service industry, Donovan maintains close and constant liaison with its customers, in order to ensure they get the best possible value from the system and to help solve any problems they encounter.

At the push of a button...

From page 17

upper limit in mind while designing the system and subsequently programming it and to ensure during acceptance testing that it has not been exceeded. If performance is not satisfactory, various tools are available for measuring the internal performance of some, if not all, of the TP monitors. Their use will enable you to find out "where all the time goes", and then hopefully tune your system in order to make it perform better. Depending on the amount of work involved, such an exercise can further delay implementation, and it is surely better to get the system design right in the first place.

At last the great day comes: the equipment is installed; the last minute bugs have been trodded out. Those embarrassing

demonstrations when everything goes wrong have been successfully explained away and Gladys in stock control can start hammering away at the keyboard.

And, what do you discover? Almost inevitably the system will not be used the way you envisaged. Nevertheless, online systems are generally popular with non-IT people, perhaps simply because they can tailor them to their own requirements. Maybe you can judge just how popular yours is by the time it takes before someone comments casually, "wouldn't it be handy if we could change that amount right at the terminal?" And when that happens, it's out with the feasibility study manual, again, back to the drawing board. Now, where can we find somebody who knows something about what really

Laura Tatham takes a look at a bureau service that is claimed to be unique of its kind in the UK — dedicated to the work of advertising and market research agencies. She says that while it is easy for the computer-minded to see, it is only now becoming apparent to UK advertising agencies that online operation is the perfect answer in this environment.

## NEWS IN BRIEF

## Quiet power for 3032

ONE of the problems facing IBM users planning a switch to the new 3032 mainframe is the need to provide a power house outside the computer room for the motor-generator power supply. MPL of Hayes is offering an easy way out of the problem with its ML 5471 TQ1 frequency converter, which has been designed to be compact and quiet enough for installation within the computer room itself. The unit provides output of 75Kva at 441 Hz and 208 volts, and is suitable for both the 3032 and 3033.

## Chinese order

THE Peoples Republic of China is to spend \$4.4 million with Electronic Associates of New Jersey, for a hybrid computer system to be used in a simulation/research laboratory. The order, which still awaits US Commerce Department approval, is for a Hyshare 700 system incorporating three Model 781 analogue consoles, a Systems Engineering Laboratories 32/55 computer, Hyshare software and related interfaces. An export licence is being applied for.

## Takeover denial

TALKS have been taking place between minicomputer Microdata of California and Olivetti of Italy — but not about possible acquisition, as was reported in the US Press. "They are talking to us about buying products, that is all," Microdata president Don Fuller told Computer Weekly.

## \$890,000 upgrade

COMPUTER facilities at Bedfordshire County Council are to be upgraded in a \$890,000 move from a Honeywell 2050 to a Honeywell Level 68/10. The equipment will be installed in 1978.

## Airline system

THE 1100/80 system ordered by the Scandinavian airline SAS has been formally announced as a three-processor 1100/83 system. The new machine will replace four Univac 404s (CW, July 7).

## Not for outsiders

A PROPOSAL to allow outside organisations to use Hamilton District Council's Honeywell 61-60 machine has been rejected.

Noise Abatement  
United Kingdom  
November, 1977

Dear DP MANAGERS & FELLOW SUFFERERS

With Reference to NOISE

Are your data input and output devices noisy? Then Consult: NIGEL MOSS (our principal researcher) on 01-205 0033, Ext. 23.

He has some positive suggestions!

# OPAS makes life easier for telephone operators

ONE of the unsung pioneers of the microcomputer revolution is the UK Post Office. In 1973, the corporation received the first Intel 8080 micro to be delivered in Europe, subsequently helped to debug the Intel PL/M compiler, and in the process developed a multi-processor telecommunications product with significant export potential. The next step in the development will be the incorporation of a bubble memory backing store.

The product, developed by the Post Office, but engineered for production, manufacture, and marketed worldwide by STC, is OPAS, Operator Position Assistance System.

OPAS is designed to cut out much of the tedious work the telephone operator at present has to do in connection with assisted calls such as credit card, long-distance coin-box, more overseas, and reverse charge calls. As an example, the number of operator tasks in a simple long-distance call-box connection is reduced from 33 to 17.

Conceived from the start as an exportable product and designed to be built into existing operator consoles, OPAS has won its first export order, with 2400,000, in Sweden. The telephone exchange at Orebro, serving most of southern Sweden, is to be fitted with a 30-position OPAS system which will facilitate the work of the operators who have to handle Southern Sweden's large population of radio telephone users.

The OPAS system automates the call set-up procedure once the operator has recorded the calling and called numbers; it records all the information needed for billing, a task at present done manually on cards; it automatically checks that the correct money has been deposited in coin-boxes; and it times calls for billing purposes, for instance when the calling party asks how

A view within the control desk of STC's Operator Position Assistance System. The centre small panel contains the electroluminescent screen and associated drive circuitry while the larger board beneath it carries the integrated circuits for control of other functions associated with the main keyboard.

much a call has cost. Its modular design allows a wide variety of other features to be added to meet particular customer requirements.

The compact solid state display on the system is also a British development. It comes from Phosphor Products of Poole, Dorset (CW, October 7, 1976), and uses DC electroluminescence of zinc sulphide particles. The result is a yellow-on-brown display, a combination which was chosen by Datasah for its D16-30 VDU following a major investment to establish the most comfortable colour combination for long periods of viewing.

Each operator control unit contains one 8080 and supports up to eight operators. A further 8080 is used to control each application of the system, such as credit card information handling, maintenance and diagnostics. A 32-position system includes 14 8080s.

"We started programming in a macro language, but switched to PL/M when it became available, partly because we had an eye on the export market and partly because PL/M is widely used in

Europe," Dr Peter Troughton told Computer Weekly.

Dr Troughton is responsible for technical development of the equipment associated with operator services, and conceived OPAS, which within the Post Office is called ACRE, Automatic Call Recording Equipment.

"Our next step will be to add a bubble memory backing store to the system for storing local telephone numbers. We are very pleased that a system developed from the outset with the world market in view should have resulted in such a promising product."

STC will be building the systems to be installed by the Post Office, and the first will go in next year.

STC had to make several adaptations to meet the specific requirements of the Swedish PTT, and looks for business totalling £1.5 million from Sweden.

PTTs in Europe, the Middle East and the Far East are now studying OPAS, and a version for the US market is under consideration.

—Tim Palmer

## Water billing project ends

PARLIAMENTARY REPORT

A £200,000 three-year project aimed at developing a computer system for billing water service charges has come to an end at Warrington, Cheshire, headquarters of the North West Water Authority. The project was carried out by the authority in collaboration with nine other water authorities.

Answering a question from Kenneth Warren (Con; Hastings), the Secretary of State for the Environment Denis Howell (Lab, Small Heath) said it had been decided that the project had reached the point where further development of the systems would best be done by the

individual authorities to meet their own requirements.

Warren asked whether the Department of the Environment could give technical resources to the authorities to enable them to develop a uniform billing service.

Howell replied that he was satisfied that the resources available to the authorities were sufficient.

Installation of solid-state System X stored program telephone exchanges will begin in 1981, Lord Winterbottom told the House of Lords last week. He was replying for the government in a debate on the Post Office.

## Fairchild F464 memory

FAIRCHILD F464 dynamic serial memory, thought to be the first 64K bit charge-coupled device to come into the market, is constructed as sixteen, 4K, "serial parallel serial" blocks, in which one bit from any one of the blocks can be addressed.

Fabricated in the double-poly N-channel (isoplanar) process, the memory features 1 TL compatibility of adding new data to put, wire and chip select and data output, and its organisation is such that the device can be packaged in a standard dual in-line package.

## USER FORUM

## Leased hardware is user's responsibility

USERS are less aware than they ought to be of their obligations in the maintenance of their computer equipment, and some appear to remain ignorant of the fact that the hardware is their responsibility, whether purchased or leased.

This is the view of Max Eastwell, UK divisional general manager of Data Processing Customer Engineering, which last year scored a singular coup by winning British Airways' mainframe maintenance contract away from IBM.

"If leased," he says, "the equipment is still the responsibility of the user. He is responsible to management, which in turn is responsible to the lessor for its condition at the end of its term of use."

"If the equipment is purchased outright, the user is responsible to management for an important capital asset, its

proper use and its length of useful life."

Eastwell calls the fact that these points are often overlooked the "rental syndrome," and explains how it came about.

"Firstly," he says, "the equipment was rented by the supplier to the user, and all services were bundled in the rental price. The supplier took over from there, and the people in the user group normally responsible for the condition of inventory, for performance and so forth, were cut off from the responsibility for equipment."

"There was no requirement for the user to know what preventive maintenance was being done, or what changes or modifications had been recommended by the manufacturer."

"So long as downtime didn't become a real embarrassment there was no fundamental requirement for the user to know the condition and how reliable it really was. As a result of this cosseted treatment, the user lost his sense of identity with the equipment and genuine control rested almost entirely with the supplier."

Even when the user moved on to purchased equipment next time around, the same attitude prevailed, according to Eastwell. "Encouraged by the supplier, he still remained remote from maintenance aspects of his hardware, but now he was ignoring the cost-effective functioning of an important item of equipment for which he was now entirely responsible."

Eastwell acknowledges that many DP executives now recognise their responsibility, but says suppliers are fighting every move the users make to try to get free.

"Only our engineers have the competence to fix our equipment, they say. Or only our people are motivated to care for your hardware as it should be. And then when the user still

shows signs of wavering, they say they don't like outsiders handling their equipment, and refuse to provide spares or only offer them on extended turn-around."

"And they refuse to allow third party maintenance organisations to use diagrams and diagnostics."

Eastwell points out that the growth of mixed vendor sites means that the best way of getting round the problem of which supplier is responsible for a particular failure is to bring in a third party organisation for all maintenance.

He believes that, as in the motor car and aircraft industries, supplier-maintained computer equipment should be the exception rather than the rule.

"The UK government must act and act quickly to create a climate in which there is encouragement for the provision of better products and services at lower prices," he says.

"They themselves are stifled and constricted in their choice of services by the policies of their principal indigenous supplier. ICL refuses point blank to provide to independent maintenance companies the support services which should be provided. They will not provide access to diagnostics, spare parts or technical support."

"The user has the right to choose who maintains his equipment, and independent maintenance organisations have the right to compete on equal terms with the supplier. But at present in the UK they cannot. I invite ICL to set a good example to the other equipment manufacturers: the company is strong and efficient enough to do so."

Max Eastwell  
...suppliers  
are fighting  
every move the  
users make to  
try to get free."

## Impact of the Unfair Contract Terms Act

A NEW Act of Parliament, the Unfair Contract Terms Act, comes into force on February 1, 1978. Such laws seldom greatly concern the computer user, but experience in Australia of a piece of consumer legislation has raised queries about the possible impact of the UK Act.

Since July 1, all the major computer suppliers in Australia, apart from ICL and Fujitsu, have refused to sign contracts for new equipment because of their dissatisfaction with the Australian Trade Practices Act (CWT, September 8).

There is as yet no indication that anything similar is likely to be the UK as a result of the Unfair Contract Terms Act, but there is some uncertainty over the legal definition of the word "reasonable" in clauses which restrict the supplier's liability for damage to a user's property.

ICL anticipates no problems from the new Act, because the way it draws up its contracts is spokesmen explained that the company had been able to continue trading in Australia because its contracts already complied with the Australian Act as well as the new UK Act.

Honeywell does not anticipate any problems with the UK Act either, but IBM, which has the fight against the Australian Act, would only say that with all new legislation, lawyers are examining its implications for IBM of the UK.

The terms of the Act may involve clauses in business contracts which limit liability for death or personal injury, signed on or after February 1. Where a supplier's negligence does not result in death or injury, but only in damage to property or business, the Act restricts the terms of the contract limiting liability to a "test of reasonableness." The courts will have to determine the meaning of this test of reasonableness.

Under the terms of the Act, the business includes the activities of government departments and local authorities. It covers contracts involving rental and lease as well as sale of goods.

## Tales from the Computer Room

If you want a Christmas present for your favourite programmer you could try Tales from the Computer Room, a collection of stories, parodies, science fiction and poems compiled by Dr John Race, of Brunel University, from magazines ranging from Men Only to Computer Dimensions.

\*Tales from the Computer Room is pp. 65p and 10p for postage. Brunel University Bookshop (77a & 79 bridge, Middlesex).

## NEWS IN BRIEF

## Privacy talks with Rees

POSSIBILITY of implementing the Council of Europe's recommendations on data protection is to be discussed with the Home Secretary, Merlyn Rees, by Michael Stewart, Labour MP for Fulham. Stewart has been asked to do so by the National Society for Crime Reduction and Social Justice, which is not satisfied with the Data Protection Committee drawing up recommendations for data protection legislation for the UK.

IN an effort to shake up its troubled Australian operations, where large 2800 sales have been disappointing, ICL has sent Peter Gynnell back to a "senior consultancy appointment". Gynnell, who was marketing manager for ICL's international division based in Putney, joined head office from various posts in the Australian company, in 1974.

FORMER Electronics Weekly communications correspondent Peter Fletcher has been appointed to the newly-created post of Viewdata manager at IPC Business Press. The company, which publishes a wide range of technical publications including Computer Weekly, is one of about 150 organisations providing information on the Viewdata service.

ONLINE access to Atkins Computing Services' time sharing and batch bureau is now available to users in Newcastle, Gateshead, Tyne, Durham, Sunderland, Gosforth, Durham and Washington at local dial-up charges following the installation of a multiplexer in Newcastle-upon-Tyne. Initially lines will operate at 10 and 30 characters per second.

A MOVE into the Russian market has been made by ICL with an order from the Academy of Medical Sciences in Moscow for a 2803. The Academy coordinates research projects in the 50 medical research institutes around the USSR. (CW, October 20.)

FLEMING Frozen Foods of Glasgow is to supplement its ICL System 10 with a third VDU. The addition will enable the company to automate the delivery of its frozen foods and achieve a stricter control over stock and cash flow.

THE complete range of terminal hardware from Harris Data Communications is now being sold in Ireland by UCC (Datacom) Ltd. This is the Irish associate company of UCC (GB) Ltd. The Harris range includes the IBM compatible 3170 and 3180 systems manufactured by what was formerly Sanders Data Systems.

A TOTAL of 300 NCR 7740 proof encoders have been ordered by the Midland Bank. Valued at about £500,000, the order has brought the total number of NCR 7740 encoders in use by the bank to 2,000, valued at almost £3 million.

SOFTWARE house Infomattas has moved to bigger premises at Ferrar House, 102 College Road, Harrow, Middlesex, HA1 1BQ. The telephone number is 01-883 0066. The company's products include ledger systems, teleprocessing monitors and an interactive validation and online inquiry package.

TO cope with growing business Anglian DP Services Ltd has moved to new offices. Formerly known as Anglian Computer Services, the company's new address is Stratford House, 100 Stratford Road, Danbury, Cheshire, CH3 7JW. Tel: Danbury (0245) 4255.

Michie

"It is my embarrassing duty to award a great man a low mark." With that comment, Donald Michie, professor of machine intelligence at Edinburgh University, this week takes to task science fiction writer Arthur C. Clarke for some of the views he put forward in Computer

Weekly's Futureview on November 10. What Michie pounces on is Clarke's belief that any problem which is theoretically computable can be solved by mortal men on planet Earth simply by piling on sufficient resources and advanced technology...

Clarke

## Prof Michie awards low marks to Arthur Clarke

IN Futureview (CW, November 10), Arthur Clarke makes the following statement: "There just aren't any limits. I mean there are no technological limits to anything. There are financial and resource and time limits, but ultimate limits don't exist."

Since the context is futuristic computing, Clarke seems to believe that any problem which is theoretically computable can be solved by mortal men on planet Earth simply by piling on sufficient resources and advanced technology.

It is my embarrassing duty to award a great man a low mark. I would not pounce on the point if the complexity-theory principle involved were not important — as important as understanding the general notions of Einstein's relativity or Heisenberg's uncertainty if one wants to speculate about cosmology or particle physics.

Donald Knuth put the matter forcefully in his invited lecture to the American Association for the Advancement of Science: "It is... possible to prove that certain apparently simple problems in logic — which are known to be solvable in finite time — will never be solved in our lifetime, regardless of how clever people become or how many resources are committed to the project."

Without inaccuracy Knuth could have added "... nor even

in the lifetime of this planet."

The awkward truth is that many a problem has a mathematically definable complexity such that for a working memory small enough to fit on Earth the fastest computation will be a large multiple of the planet's expected lifetime. Most people would put this at a mere 10<sup>10</sup> more years or so.

Remember that the number of atoms that can exist in each cubic inch sets an upper limit to memory and to the degree of parallelism achievable by micro-miniaturisation, and that the speed of light sets limits to propagation and switching speeds.

"Does a good algorithm exist for this problem?", meaning by this that doubling the size of the problem increases the time to compute solutions by at most a constant factor.

This is not an ivory tower question. The Travelling Salesman problem, for example, crops up in industry in various guises, including in numerical control of punching and drilling tools, allocation and scheduling in machine shops, and of course in transportation. Methods are known for medium-size problems, but Knuth points out that

"the algorithms are not 'good' in the technical sense since the running time goes up rapidly on large cases."

It is now believed that for the Travelling Salesman and for a class of equivalent problems of practical importance no good algorithm exists. If this can be proved then it will be no use Arthur Clarke telling us that optimal solutions to million-point TS problems will be computed by our biological descendants or by our electronic heirs. We will know better.

Having taken a pinch of salt, let me now apply it to Arthur's till before he takes his readers off to yet wilder flights.

"To put it bluntly and brutally," he writes, "the machine is going to take over" and he produces out of his waistcoat pocket my colleague I. J. Good's Ultra-Intelligent Machine. And Good said that it was God, as has been remarked — probably by Good.

My beloved mathematical friend once wrote to the Queen with the suggestion that she make him a Life Peer, on the irresistible (he thought) ground that people would then be able to say "Good Lord, here comes Lord Good!"

## Wine and cheese advert 'not an inducement'

IS the offer of wine and cheese an inducement to attend a job interview? This point is raised by London reader W. A. Toose in a letter complaining that an advertisement in Computer Weekly contravened the code of practice for recruitment companies introduced by the Computing Services Association (CW, October 20).

The advertisement, from Computer People, invited programmers and analysts to the company's offices for wine and cheese to meet informally managers from a firm looking for staff. The advertisement specified that "suitable candidates" were invited.

Toose said this contravened the code, which states that a recruitment company "must not offer candidates any financial inducement, or inducement in kind, to reply to an advertisement, to attend an

interview or to accept a job offer."

Bernard Jacobs, who led the team which drew up the code, said, "I think this complaint is taking things a bit far. It's not an inducement in kind which is being offered. People aren't going to sit there and wait for the sake of a glass of wine and a blocuit. There has to be an element of reasonableness about the interpretation. This clause is based on the Employment Agencies Act, which sought to stamp out practices such as offering calculators or £10 vouchers, which are definite inducements."

Jack Cowley, senior consultant at Computer People, agreed with Jacobs that there had been no contravention of the code. "If you're going to split hairs you could say that advertising a job was an inducement to attend an interview," he said.

## North Sea oil simulation model marketed by Scicon

TWO systems developed by British Petroleum are to be marketed by the company's Scicon Computer Services subsidiary. They are the North Sea Simulation Model and Programmed Production Planning.

NSSM was developed to study problems in applying cargo to drilling operations in the North Sea. The technique is already being used by Shell.

The PRP model can be used to represent all the processing and blending options available to an oil refinery and to calculate op-

erating complex. The system has regularly been applied at the refineries in London, Kent, Gothenburg and Llandudno. The system is to be run on two Univac 1108s in Milton Keynes and can be accessed through terminals installed at users' offices or via Scicon bureaux throughout the country.

Cost of a typical NSSM run is about £100 and several would be needed for a particular study. The system applies for PRP to a consultancy fee, guidance

## PROFILE

## B1700 Users' Group (Scotland)

THE B1700 Users' Group (Scotland) has 14 member installations — virtually all the Burroughs B1700 sites in Scotland.

Although some members are also in the UK Association of Burroughs Computer Users, they say that there is no B1700 sub-group for Scotland in the association, and point out that most of the meetings are held in the south end of the Scottish members a lot of time and money to attend.

However the group has close contact with the main association. It has also talked as a group to Burroughs' regional managers and hopes to get official recognition by the company in the next year. B1700 users or potential users in Scotland can contact the group through the secretary, A. F. Ramsay, DP manager, William Grant & Sons, Park Road, Paisley. Telephone 041-884 3211.

## 'Go out and broaden your horizons'—NCC director

THERE has never been such a time of social, political and technical uncertainty in the computing community and data processing managers should go out and get a broader contact in which to consider their tasks in order to take better decisions and enable their operations to respond sensibly to new situations.

This view is put by David Fimberg, director of the National Computing Centre and himself an ex-data processing manager, in the NCC's Journal Interface. "In an industry where both the technology and its application are developing so rapidly that tomorrow's one of us must occasionally get out of the cocoon of his immediate surroundings and take a long, hard look at where computing is going and the way in which he should guide the organisation employing him," writes Fimberg.

On the social and political front, computing is contributing to the changing relationship between management and labour, he says.

On the technical front, says Fimberg, new technologies like bubble memories, fibre optics and voice input are closer than we think. And there is a growing trend to focus data processing not on a mainframe but on an automatic switchboard as computing and communications converge.

Fimberg says these developments mean that the data processing manager is presented with a bewildering array of opportunities but still surrounded by a battery of constraints.

So Fimberg's message is: Go out and broaden your horizons, through courses, seminars and conferences. "We have ample opportunities to update ourselves on the specific aspects of computing affecting short and medium term problems through innumerable training seminars and conferences held throughout the year."

Are data processing managers concerned about or even interested in the type of developments mentioned by Fimberg? Or do their worries centre on more mundane things like where they are to find some more programmers? User Forum would be interested to hear your views.

On the technical front, says Fimberg, new technologies like bubble memories, fibre optics and voice input are closer than we think. And there is a growing trend to focus data processing not on a mainframe but on an automatic switchboard as computing and communications converge.

## USER VIEW

Under the terms of the Act, the business includes the activities of government departments and local authorities. It covers contracts involving rental and lease as well as sale of goods.

If you want a Christmas present for your favourite programmer you could try Tales from the Computer Room, a collection of stories, parodies, science fiction and poems compiled by Dr John Race, of Brunel University, from magazines ranging from Men Only to Computer Dimensions.

\*Tales from the Computer Room is pp. 65p and 10p for postage. Brunel University Bookshop (77a & 79 bridge, Middlesex).

A TOTAL of 300 NCR 7740 proof encoders have been ordered by the Midland Bank. Valued at about £500,000, the order has brought the total number of NCR 7740 encoders in use by the bank to 2,000, valued at almost £3 million.

SOFTWARE house Infomattas has moved to bigger premises at Ferrar House, 102 College Road, Harrow, Middlesex, HA1 1BQ. The telephone number is 01-883 0066. The company's products include ledger systems, teleprocessing monitors and an interactive validation and online inquiry package.

## HONG KONG

**PDP 11/70  
PROGRAMMERS  
RSX-11M**

Chartered on-line, Hong Kong's leading data processing service organisation, is seeking the services of experienced programmers to assist with installation of an on-line real time application using dual PDP 11/70 processors.

A two-year contract is envisaged. Benefits include an attractive salary and accommodation allowance as well as travel and relocation expenses. The maximum tax in Hong Kong is 15 per cent. Applicants should write to the Technical Manager, Chartered On-Line Ltd., Asian House, Hennessy Road, Hong Kong.

Interviews will be held in London during December, 1977.

## THE OPEN UNIVERSITY Faculty of Technology

### ASSISTANT SCIENTIFIC OFFICER IN DESIGN

An Assistant Scientific Officer is to be appointed within the Design Discipline, Faculty of Technology. The post is available from January 1, 1978. The successful applicant will be required to work in association with a small research team on a number of ongoing research projects concerned with studying spatial configurations and relational structures relevant to design in a variety of technological fields. A mathematical background in combinatorics and graph theory is desirable. The person appointed is expected to have a good computer science degree with specialist experience in using and writing combinatorial and graph manipulation algorithms in a range of languages including ALGOL 68 and POP 11 ASSEMBLER. Several years' academic experience as a systems programmer on minicomputers with an interest in design applications is essential.

Salary on the scale £2904-£4180 per annum, plus USS benefits (under review from 1.10.77).

Application forms and further particulars are available, by postcard request please, from The Personnel Manager (S03), The Open University, P.O. Box 76, Welton Hall, Milton Keynes, MK7 6AL, or by telephone from Milton Keynes 83888. Closing date for applications, December 8, 1977.

## NEW BIRMINGHAM SALES OPPORTUNITIES Eurocom Data Limited

### SALES EXECUTIVES and SYSTEMS ANALYSTS

(To market COM in the Midlands)  
Realistic on Quota earnings  
**CIRCA £7000 + CAR**  
(Basic £4000-£6000 + Commission)

Eurocom Data Ltd. is a fast growing international Computer Output on Microfilm Bureau providing services through 6 centres in the U.K. and 8 further centres in Europe via Eurocom Data (Holdings) Limited.

Suitable candidates are likely to be successful VRC or Bureau Salesmen who have a good working knowledge of Computer and Business systems, and have consistently achieved Quota. However, we are pleased to train experienced systems/programming Persons interested in moving to a sales environment.

Applications to:—  
The Personnel Manager  
Eurocom Data Limited  
3 High Street, Rickmansworth, Herts.  
Tel. No.: Rickmansworth 74323

## UNIVERSITY OF BIRMINGHAM COMPUTER CENTRE SYSTEMS GROUP — COMPUTER OFFICERS

The Computer Centre already provides a wide range of local and remote computing facilities to the University. These are now being further extended by the installation of a large dedicated microcomputer system for the processing of data in the development of the Midlands Universities Computing Network.

The Systems Group at the Centre will be responsible for the development of these facilities. Applications are invited from two areas of Computer Officer in this Group. Applicants should have several years experience in systems software and/or hardware in a service environment, as shown by the successful completion of several projects. Experience in graphics or in data communications would be advantageous. A higher degree is desirable, but clear evidence of previous work successfully completed is equally important.

**SALARY RANGE £2,804 to £4,811** (plus £1,527 plus superannuation under USS)

Further information from the Assistant Registrar, Science and Engineering, University of Birmingham, P.O. Box 363, Birmingham, B15 2TT, to whom applications should be sent, including full curriculum vitae and references, by 15th December 1977.

Please quote Ref. CW22

## STARLING

### SYSTEMS ANALYST (Commercial Systems)

Part of an international group with our headquarters based in rural surroundings, we are one of Europe's leading designers and manufacturers of industrial electronic systems. We are seeking a Systems Analyst to join our team in the development of new systems. The successful candidate will be responsible for the analysis and design of systems, and will be required to work closely with the design and development teams.

We are seeking a new team to develop a range of computer applications, mainly operating on-line. A technical analyst is required to take control of Commercial Systems development including sales, analysis, sales analysis and sales, brought together in a team. The person appointed will not be expected to program but a sound programming background is essential, preferably with on-line experience on ICL 2903-4 equipment.

Applications are invited from persons up to the age of 30 years with at least one year's experience as a commercial systems analyst. An attractive salary will be negotiated, and benefits include four weeks annual holiday, other one year's service and a pension scheme. For an application form, telephone or write to Mr. J. W. Harding, our Recruitment Officer, Starling Cable Company Limited, 1st Floor, Aldermaston, Reading RG7 6DD. Tel. 01235 3221.

## INSTITUTE OF HYDROLOGY

### SCIENTIFIC OFFICER

(PHYSICIST/PROGRAMMER)

There is a vacancy for a Scientific Officer in the Institute of Hydrology. The successful candidate will work with a small team engaged on studies of soil water movement. A knowledge of numerical modelling methods is desirable and the ability to organise and work with large computer data files is essential. The primary task will be the organisation of the data base but this will subsequently develop into modelling of soil water processes, probably with direct involvement in field experimentation and instrumentation.

Qualifications: A degree or HNC in Computer Science, Physics or Mathematics.

**Salary and Conditions**  
The appointment will be to the Scientific Officer grade, £2140-£3287 + £313.20 + Stage 2 Pension subject to a maximum of £208.80 per year. There is a 5% annual increase. A non-contributory pension scheme. A starting salary above the minimum may be offered for relevant qualifications or experience.

The Institute is situated in pleasant rural surroundings and has a staff restaurant, an indoor sports centre, a social club and a flexible working hours scheme.

Staff of the Council are not Civil Servants, but their pay and conditions are similar to those of the Civil Service.

Write for application forms quoting reference 81 to: Institute of Hydrology, Wallingford, Oxon OX10 8BA.

### CONSULTING SERVICES SALESMEN (Timesharing & Turnkey Systems Incorporated)

With further large scale expansion planned throughout 1978, the group urgently needs experienced top level salesmen to help penetrate existing large volume consulting/turnkey systems and timesharing markets. EMS at present have a product range unmatched throughout the entire UK market, offering scope of penetration in at least 5 major DP user problem areas, ensuring constant work availability.

Ideally, candidates will be capable of functioning as Business Analysts, able to rapidly identify client problems, define services available and to collate and present appropriate reports at Board level. Equally, preference will be given for salesmen able to effectively present lecture topics at varying UK and European seminars and marketing demonstrations of new equipment services such as turnkey systems.

Ability to project accurately time scales for systems and programming projects will be beneficial, as would knowledge of how to define configurations required with turnkey systems or to assist with hardware evaluation and package evaluation.

Excellent opportunities exist for leading salesmen to acquire a managerial role if required, within individual sectors of the group. Candidates must be employed in a similar capacity in the UK and accustomed to producing Consulting Sales revenue, minimum value £20,000 p.a. Hardware business minimum value £400,000 or a turnkey systems value to be discussed. A dedicated company commitment will be judged as important for future employment within the group.

Consultant: John Wood.

### PROGRAMMERS COBOL/ASSEMBLER/PL1 IBM/HONEYWELL/ICL ETC. LONDON & HOME COUNTIES £3,500 to £6,000

EMS at present have hundreds of Southern clients desperately seeking programming support staff to work on a wide variety of projects including sales, accounting, logistics, payroll, stock control, production control, Management Information Systems, Database Development, Networking, etc. Most installations currently use EMS recruitment facilities to assist both to maintain and increase manning levels within the company. Each day up to 50 vacancies are forwarded by post or telephone from the Southern Home Counties. Clients include Banks, Business, Consultants, Distributors, Engineers, Manufacturers and Computer Manufacturers, Insurance Companies, etc. Each application form returned to EMS is processed within 24 hours and in the hands of relevant clients within 48 hours. EMS candidates are generally attending a series of interviews within a week of applying to us. We urgently need your profile also to help us assist hundreds of clients achieve recruitment stability. Salaries are attractively geared to match the most competitive market and conscientious staff. Telephone today for our application form.

Consultant: Salina Mills/Carol Prouden/Dan Walklate.

### PROGRAMMERS — COBOL/PL1 — MIDLANDS £3,500 to £5,000

At present, we are submerged with the sheer quantity of outstanding vacancies from clients desperately seeking to attract additional staff to assist with key development programmes. Both PL1 and COBOL programmers are in very high demand. Literally up to dozens of vacancies are available for each applicant we receive, depending upon local circumstances. While checks are made on your application form, we are also looking for opportunities to move from programming to an Analyst/Programmer career path. Installations vary on a wide scale from commercial to industrial, embracing all industries and sectors. EMS are currently placing up to 20 programmers a week in the Midlands each week, and could be placing 200 with more significant advertising response. Telephone today for an application form and we will get your career development moving for you.

Consultant: Salina Mills/Carol Prouden/Dan Walklate.

### ANALYSTS & ANALYST/PROGRAMMERS — UK TO £6,000

Each week over 500 vacancies for Analysts are available with EMS throughout the entire UK, in every major city and town in the country. Extensive national networking by our teams results in new job opportunities rapidly being identified for new candidates with 48 hours of receipt of your application form. Every profile is cross checked against thousands of vacancies held on the group computer, seeking to provide you with a choice many times greater than available elsewhere. High calibre Analysts are in demand for a wide range of projects including: Accounting, Logistics, Payroll, Production Control, Planning, Accounts, Order Processing, Systems, Production Control and Planning, Accounts, Order Processing, etc. Analysts completing an EMS profile this week will be attending interviews within 7 days on average. Apply to EMS today — we got results, a salary increase for you, new interesting career prospects, and it doesn't cost you a penny.

Consultant: Neil Bradley/FA Tyler/Dan Walklate.

### ANALYSTS — HERTS TO £6,000

We urgently require experienced Analysts for a major distribution group involved in extensive systems conversion and enhancement. The person is an ICL or IBM hardware although experience in other hardware would be considered. Basically, we seek knowledge of applications procedures and development in Accounting/Sales Order Processing, Stock Recording/Control, Merchandising and M.I.S. Large quantities of staff are required from Junior Analyst to Team Leader level. Assistance will be given with relocation where appropriate. The company is located in attractive rural surroundings within the Herts area and offers excellent career development prospects.

Consultant: John Wood.

### OPERATORS — LONDON & H. COUNTIES TO £5,000

Numerous vacancies are available each week with a wide variety of clients seeking additional support staff to assist with developing installations. Single and multi-shift systems exist with appropriate premiums being paid for shift working. Salaries vary between IBM, ICL, Honeywell and Unisys. Many equally early shift leader/shift manager prospects are available with expanding installations. Knowledge of ICL is highly sought by IBM installations, as is GEORGE II and III or NEW RANGE by ICL. Honeywell and Unisys are also in demand. Apply to EMS for an application form today and get real career prospects — and a deal!

Consultant: Salina Mills.

## HERTFORDSHIRE SENIOR SYSTEMS CONSULTANT

**IDENTIFY AND CREATE**  
**Salary - Bonus up to £9,000 + car**

Our Clients are seeking a Computer Professional — the link between their highly successful range of computer systems and the real problems of the technical and commercial user. They see the interpretation of these problems and the identification of creative solutions being an exceptional challenge and career opportunity.

Successful candidates should ideally possess:

- \* a background related to project management in a pre-post sales function.
- \* the ability to co-ordinate the Company's technical and management resources in making sales proposals.
- \* the self-motivation, effective communication, and presentation necessary when dealing with senior client management.
- \* some knowledge of distributed processing or database systems.

Financial rewards are first-class. At the same time, you can expect your role to be enhanced by the creative support of the software and application teams.

## Australia Two Systems Analysts AS \$13,000-15,000

Olympic Consolidated Industries Ltd. is an Australian-owned tyre, cable and general rubber products group based in Melbourne, with over 5,000 employees and turnover in excess of A\$150 million. In March 1978, the Company will be installing an ICL 2960 to replace current ICL 1900 equipment and it is intended to develop an extensive database to service manufacturing and commercial applications.

We are seeking one Analyst to assist both current staff and an ICL consultant in the conversion to IDMS of an existing NIMMS/DMS2 database for manufacturing applications. When this project is completed, the Analyst would then assume the major responsibility in the development of one of a number of new systems proposed in the areas of production scheduling and recording, costing and budgeting, and inventory control.

A second Analyst is being sought to work with current staff in the redesign of existing commercial applications and the integration of these with manufacturing applications in a company-wide database.

Applicants should be graduates with at least three years of appropriate experience. Salary will be negotiated based on qualifications and experience, but a range of A\$13,000-15,000 (£8000-£9500) can be taken as a guide.

Interviews will be conducted in London on 1st and 2nd December by an Olympic representative from Australia.

Please phone 01-788 7772 and ask for extension 2034 or write without delay, enclosing full details of experience to date to: Carol Hudson, ICL, Bridge House North, Putney, London SW6 3JX, quoting reference CW1597.

## PROGRAMMERS up to £6½K GREATER LONDON

Providing good people to top companies has been the policy for this Buckinghamshire software house. The increasing demands for their high quality work have given rise to a need for more people but only the right people. Who are the right people? Well in this instance it is experienced commercial, mainframe programmers. They must have the necessary motivation and responsibility to work on customer premises, ensuring that systems are installed on time and without error.

Ideally they require programmers experienced on IBM equipment and conversant in COBOL, ASSEMBLER, or PL1. However, retraining will be given to other applicants. As the work is spread throughout the Greater London area it is essential that applicants are mobile, preferably possessing their own car. The demands of this job are more than met by the rewards, a high salary, travelling expenses, profit share and regular social activities to ensure that everyone has a good time.

Ref. CW620

## SYSTEMS PROG to £4½K BRENTFORD

This is an excellent opportunity for a programmer with 1-2 years' experience of Assembler and possibly PL/1 to join a lively systems programming team. The vacancy has arisen through a rapid expansion in the use of data processing facilities which are based on a multi-processing 370/158 complex. The team is responsible for supporting the manufacturer's software, which includes IBM's most advanced operating system, a TP network running under CICS and a time sharing service. Initially you will be working in one of the areas mentioned, but you will have an opportunity to gain experience in all areas. Training will be provided where necessary. Our client is a UK owned multi-national company manufacturing a wide range of consumer products. If you are looking for good career prospects using the most modern and sophisticated equipment in a very friendly atmosphere, this position is ideal.

Ref. CW624

## SUPPORT ANALYST £5½K + Car + Bonus LONDON & THE NORTH

A manufacturer's success depends on its products and its people. Our client, an international mini computer manufacturer offer the most wide ranging compatible product line available from any company today. Their processors range from micros to powerful medium sized computers. These are backed by a vast selection of peripherals, and of prime importance, a comprehensive range of software. The people they require are support analysts to work in a pre-sales role. This is not a desk job. Most of the time will be spent working alongside the salesforce to provide their customers with necessary software expertise and systems advice. Demonstrations, benchmark programming and design are all part of the job. An in-depth knowledge of mini computer system software, operating systems and applications is essential, also programming ability in ASSEMBLER and COBOL and/or FORTRAN. Special systems experience in communications or database techniques would be advantageous. As well as positions based in W. London this company also seeks staff in Birmingham and Manchester.

Ref. CW626

## SENIOR PROGS to £5K WEMBLEY

Our client, an engineering company whose name is known and respected throughout the world, require experienced programmers. These vacancies are ideal for those people who have a good knowledge of COBOL and went to progress into a position of responsibility. Experience on IBM 370 equipment under DOS/VS would be preferable, but not essential. You would be assisting the Chief Programmer and a Systems Analyst in planning, writing and testing programs on both industrial and commercial applications. These include production control, order processing, stock accounting, ledgers and payroll. As the programming staff work as a team to cover all projects and have a close working relationship with the systems analysts, the work is both varied and interesting. Career progression into the systems area is actively encouraged. The company provides a subsidised canteen and an active sports and social club operates nearby. That, coupled with extremely pleasant, modern office accommodation, makes this a very worthwhile opportunity.

Ref. CW621

## AN INVITATION WITH A DIFFERENCE

Are you looking for a new job? Do you seek a change but not a move? Look no further the solution could well be on your doorstep.

We are currently working on behalf of several top companies in the London. They comprise manufacturers, software houses, bureaux etc. users. Between them they seek programmers, analysts, support staff, lecturers and consultants. Some indication of the standard and variety of vacancy may be seen on this page. In order to make it easier for you to discuss these and other vacancies in your area we are coming your way next Wednesday. Drop in and see us during the day or on your way home. Let us find you a new job for the New Year.

## WE ARE COMING TO SEE YOU! MEET OUR CONSULTANTS

at the LONDON EUROCREST HOTEL

next to the Wembley conference centre

on WEDNESDAY, 30th NOVEMBER  
any time between 12 NOON and 9 PM

If this is not convenient then 'phone Rowland Middleton or Pam Quinlan on 637 9611, quoting job reference number

## SENIOR PROG to £5½K LONDON N.W.10

This senior position would be suitable to someone with very good COBOL experience. As you may be required to supervise a team of less experienced programmers, you should be able to show experience or ability in this area. You will be responsible for program design and specifications and will also be expected to communicate with users. The company, one of the largest food groups in Britain, operates extensive real-time on-line systems, linking their warehouses, factories and distribution depots with the central computer. They have just completed the design of the first part of a stock accounting and control system which they are going to integrate into their existing order processing and ledger accounting systems. You would be involved with programming this new system and assisting in its development for the future. Career progression is encouraged and regular training courses are arranged to provide the necessary skills. The company also has vacancies at a programmer level.

Ref. CW627

## SYSTEMS ANALS to £6½K BRENTFORD

Suitable candidates for these very attractive positions should have a background of at least 3 years' in-depth commercial systems and 2 years' COBOL programming and will probably be graduates. Our client is a major international company involved with the design, engineering and construction of, among others, petrochemical processing plants. The size of the company's operations is reflected in the size of the computer systems being developed. Successful candidates will be responsible for developing part of a project cost management system, including detailed discussions with various users, and will be feeding a team of around 5 people. A limited amount of travel between company locations, possibly abroad, is to be expected. Completion of this system in mid 1979 will bring about the integration of all the company's financial systems and provide management with a more accurate means of costing and budgeting a project. Database systems will be developed in the future, so career prospects are excellent. Opportunities also exist for analysts/programmers and programmers on this system.

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

# SPOTLIGHT ON N.W. LONDON

## ANALYST PROGS £5-9K MIDDLESEX

Our client has style, company style. Its unique way of operating has helped it to become the largest independent computer service company in Western Europe. It is wholly owned by its employees each person being directly responsible for its sales success and as far as possible acting as their own boss, while at the same time, being part of an enthusiastic and extremely sociable young team. Due to the continually increasing workload they require analysts and programmers with commercial, accounting or financial systems experience. It is essential that applicants have had responsibility for the installation of at least one system. Programming experience may be in either high or low level languages; COBOL or Assembler are preferred. The considerable customer liaison involved in this job demands a business-like appearance and attitude. Most of the work is local and thus development done in-house, nevertheless applicants should be mobile. High salaries, top working conditions and every opportunity for promotion are given in return for hard work and enthusiasm.

Ref. CW622

## LECTURER £5K HERTS

The chance to set up and run an entirely new training department is offered by our client, a small but thriving mini computer manufacturer. They offer a wide range of courses including Assembler level programming, operator training and computer appreciation at manager level. These are given to both customers and staff at the company's brand new premises, just 15 minutes by train from central London. The successful candidate will handle the entire training function, booking in the courses, arranging accommodation, designing and preparing new course material, presenting the courses and writing course reports.

This is extremely rewarding and stimulating work involving a high degree of personal contact at all levels as well as considerable responsibility. It is essential that candidates have a background in programming and ideally have had lecturing experience. Above all they must have the right personality and attitude — outgoing, able to easily communicate ideas and hard working.

Ref. CW623

## SALES SUPPORT £5½K + Car HARROW

Simplicity of operation, has proved a successful concept for our client, the first international company to develop and manufacture a purpose built Key to Disc System. They have maintained this concept with their new micro processor based, multi user, distributed processing system, which for ultimate ease is user programmable in ANSI COBOL. To support their busy sales force they require outgoing presentable young persons who would enjoy the demands of working in a fast moving environment. There is continual customer involvement both in pre and post sales support. You will need the necessary experience to undertake systems analysis proposals, demonstrations as well as customer training both in house and on site. The systems installed are all commercial and written in COBOL, a comparable background is essential. This is a great opportunity to put your programming and systems skills to good use while furthering your career in the more stimulating, varied and rewarding support environment.

Ref. CW625

## SOFTWARE PROG £5½K ACTON

If you have a thorough knowledge of IBM Assembler and are looking for the opportunity to work on software, this position would be of great interest to you. You will be working with the systems programmer on a variety of interesting software packages including an on-line program development system, an expanding TP network, a DOS/VS operating system and future development of a database system. Experience of these sophisticated systems is not necessary as training will be provided. Suitable candidates would be mature, responsible people who have probably reached a senior programmer level.

Our client, who organises and manages community resources, offer job security, steady career prospects and an attractive range of fringe benefits. These include 5 weeks' holiday, flexible working hours, and interest free season ticket loans. They will also provide 100% removal expenses, pay legal fees up to £300 and in suitable cases, lodging allowance.

Interesting work together with attractive fringe benefits make this an excellent opportunity.

Ref. CW629

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

A lot of people reading this advertisement will be able to tick one or more boxes in the first four columns. The fifth is the problem. If you can tick one or more in the first four and one or more in the fifth, we can virtually guarantee that our client would like to interview you. Equally important, we think you would like to interview him.

<b>1</b> Have you held a position as	<b>2</b> Are you currently earning circa	<b>3</b> Have you had experience with	<b>4</b> Are you interested in	<b>5</b> Are you capable of working on
<input type="checkbox"/> Systems Analyst	<input type="checkbox"/> £3,000	<input type="checkbox"/> CORAL	<input type="checkbox"/> Antireflection package	<input type="checkbox"/> Data Transmitters

## SYSTEMS ANALYSTS

A Vital Role in Telecommunications

The Management Services Division of Cable & Wireless is engaged in the development of systems used to support our international telecommunications activities. We are planning a number of major projects involving the use of mini- and micro-computers, database techniques and distributed processing. We need experienced Systems Analysts to work with teams of programmers on these projects. You must be prepared to undertake some foreign travel, mainly to the Middle East.

Sound experience in all aspects of systems analysis and design is essential; good business sense coupled with a strong personality is important.

These appointments represent opportunities to build successful and rewarding careers with us. Commencing salaries will be at least £5,000. In addition, a wide range of benefits, including foreign travel allowances, are applicable.

To discuss these appointments, ring Howard Yates on 01-242 4433 extension 4506. If you prefer, write with brief career details to:

Recruitment Manager,  
Cable & Wireless Limited,  
Dept. A664(s)/782,  
Mercury House, Theobalds Road,  
London WC1X 8RX.

The Cable and Wireless Group — comprising over 40 companies operating in 70 countries — is the world's largest international organisation supplying telecommunications services and facilities. Systems and services embrace space, radio, cable, telephone and specialised networks; broadcasting and television, telephony, telegraphy, telex, facsimile and data.

## MYRIAD APPOINTMENTS LIMITED

Computer Personnel Consultants

### PERFORMANCE MEASUREMENT

NEAR READING

£6000-£8500

A key department within our client's organisation comprises an elite team specialising in Performance Measurement and the Comparative Evaluation of various hardware and software products offered by major manufacturers.

The department is presently being expanded and a number of additional staff are required who have experience in carrying out benchmarking exercises using hardware monitors and other sophisticated techniques. In addition to organising system performance trials the positions call for a high degree of individual flair and initiative in reacting to findings to ensure optimum results are achieved in comparative situations.

Whilst candidates should bring expertise in any area of hardware or software performance measurement, specialist knowledge in any one of the following would be of particular interest: —

- ICL 1900/2900 under GEORGE/Systems 6 or K
- Univac 1100 under EXEC-8
- Honeywell Series 80/84-60/66
- Burroughs B700/800 series

The successful candidates will have the opportunity of broadening their horizons to a wide range of products and keeping abreast with the latest hardware and software available.

The Company has substantial interests throughout the world and provides its employees with extremely good conditions of employment and considerable scope for career advancement.

Please telephone for a confidential discussion or write to:

30 Fleet Street London EC4A 3DF  
01-353 589

Expanding travel/hotel group in pleasant seaside location near Folkestone is strengthening its computer department and requires the following personnel:

### D.P. MANAGER c. £6,000 + CAR PREFERRED AGE 30 +

The ideal candidate will have at least seven years' experience as D.P. Manager and some experience using system 3. Our hardware is IBM system 3 model 12 or 3270's. In depth knowledge of C.C.P. is essential, as is experience in liaison with departments. The successful candidate will report directly to the Managing Director and is responsible both for day-to-day running of the computer department and its future development.

### SYSTEMS ANALYST c. £5,000

Having several years' experience of system 3, the successful applicant will report to the D.P. Manager.

Both positions offer attractive working conditions, help towards relocation expenses and other fringe benefits.

Apply in confidence, enclosing C.V. and details of current earnings, to:

**Roger Da Haan, Managing Director  
INTER CITY TOURS LTD.  
Enbrook House, Sandgate, Kent**

These positions are open to both male and female applicants

#### WESSEX REGIONAL HEALTH AUTHORITY

#### DATA PREPARATION TEAM LEADER

required for our Computer Centre at Wimbor, Winchester. Applications are invited from suitably qualified and experienced persons to be responsible for the Data Preparation Supervisor for a small team of Key Edit Operators. Candidates should, ideally, be experienced in Key to Disk.

Good working conditions and career opportunities available.

Salary Scale Supervisor II, £2,820 rising to £3,055 inclusive of supplements.

Job Description and Application Forms available from the Personnel Department, Highways, Ramsey Road, Winchester, Hampshire, SO9 4TT.

Closing date: 29th November 1977

#### LOWFIELD (STORAGE & DISTRIBUTION) LTD.

#### REAL-TIME PROGRAMMER

Up to £3,760 p.a. Daventry, Northants

Lowfield, a subsidiary of Imperial Foods, provides a national food delivery service based on major wholesalers and distribution depots throughout the U.K.

At our Daventry Headquarters we have a team developing advanced real-time computerised data handling systems using a distributed network of Data General Computers.

We are now seeking to strengthen this team with a man or woman, preferably with two years' job experience in real-time systems.

Please write giving details of age, qualifications, experience and salary to: Personnel Director, Lowfield (Storage and Distribution) Limited, 4-6 Church Street, Northamptonshire.

## Tired of your good ideas going down the drain? Not as a Systems Analyst with OSMA Plastics

Our client is Wavin Plastics, whose OSMA range of plastic building and drainage products are recognised market leaders. They have asked us to recruit a Systems Analyst for them at a salary of around £5,000 — someone who wants to become involved with the development of On-Line systems.

### PROSPECTS

So many systems jobs don't really lead anywhere at all. This one does, and we can substantiate this by saying that if you have between one and two years' systems experience and you want to move into the development of On-Line systems, then have a look at Osma Plastics. They are in the forefront of their industry, a stable, growing company utilising the latest computer techniques, constantly satisfying the need of an extremely demanding management, but creating for their own computer staff some exciting technical opportunities.

So what must you offer in return? At least one successful system, be enthusiastic, enjoy your work, be creative and like working with a minimum of supervision.

### LOCATION

Wavin Plastics are based just outside London, not very far from London Airport, an area which is easily commutable to from extremely reasonably priced housing areas, which are also without doubt, some of the nicest areas to live in, in Southern England.

### TO APPLY

Please apply to John Goldsmith by ringing 01-828 5356 during normal office hours, or outside normal office hours on Camberley 21266. Alternatively, please ring John Quenby, DP Manager for Wavin Plastics on Bedford 741220. Ref. 1057.

## JBA

### Senior Consultant

Sales Division Herts package £9000 + car  
A highly successful computer manufacturer is seeking to appoint a senior member for a team which is totally responsible for the company's larger systems sales. Candidates will be able to demonstrate previous experience of project control, probably in a post sales support role: have the ability to identify customer requirements; co-ordinate resources, and to deal positively with clients. Proposal writing and presentations are both considered important aspects, an understanding of Distributed Processing, DBMS applications and experience on large mainframe machines would be a distinct advantage.  
Excellent career potential.

Contact Margaret Stevens

### Systems Consultants

London and Home Counties up to £7250  
Our client, one of the largest software houses in Europe, has vacancies for systems staff to work on a variety of projects in the South of England. Applicants must have at least four years' in systems analysis and design and several years in programming. Experience of commercial applications using mainframes and minis would be ideal.  
Excellent salaries and opportunities.

Contact Jim Baker

### Chief Programmer (RPG 2)

Central London circa £8000  
A large commodity trading company with an IBM installation seek an experienced RPG 2 programmer looking for a senior post. Duties will be to supervise programming and operations staff, maintain and ensure adherence to standards and liaise closely with Systems Analysts. The likely applicant will probably be between 24 years and 30 years, progressive, self assured and capable of dealing at all levels. Excellent prospects.  
Good opportunity for right person to really establish a career path.

Contact Mike Creamer

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

**JAMES BAKER ASSOCIATES**  
International Personnel Consultants  
16 Maddox Street, London W1 Tel: 01-491 4478

### Systems Engineer/Analyst

West of London neg. circa £6000  
Applications are invited from those who can make an immediate contribution in a demanding technical role. In order to qualify for this job it is essential that candidates have experience of commercial or manufacturing applications and be able to demonstrate a thorough knowledge of an Assembler level language. Specialist skills, such as real-time development on minicomputers will be highly valued. This is a chance to work on possibly the most advanced manufacturing control system outside the U.S.A.  
An excellent opportunity for the ambitious technician to join a small but highly professional team.

Contact Margaret Stevens

### Minicomputer Programmers

Berkshire c.£5750  
A large and well established British company has outstanding opportunities for programmers to work on the development of sophisticated real-time systems. Candidates must have at least one year of programming in either Assembler, CORAL or FORTRAN on technical or commercial applications. Experience of real-time projects would obviously be an advantage. These vacancies offer the chance to work with a professional team using new techniques for advanced systems.  
Salary according to experience. Generous fringe benefits and relocation assistance.

**AMES PERSONNEL**  
TELEPHONE: 01-767 0611

**BUSINESS  
SYSTEMS  
ANALYST****LONDON WEST END**

Mills and Allen International Limited, a large group of companies with interests in poster and cinema advertising, money broking and printing requires an analyst to assist the Systems Development Manager in the introduction of new Methods and expansion of existing computerised systems.

The group already uses several bureau facilities to provide its computing power, and plans are being formulated to expand into online enquiry systems within the next year. In addition one of the group companies will be acquiring an in-house computer due to be live in July 1978.

Future development plans are extremely varied, and the successful applicant will be expected to design, formulate and implement the correct computer solutions for the appropriate business requirements.

Qualifications are not rigidly defined for this post, but the successful applicant is not likely to have had less than three years' analysis experience, preferably with a strong commercial background and some knowledge of on-line computing techniques.

A salary in the region of £6500 can be expected with further increments negotiable for applicants with the necessary experience.

For further information write to Chris Ryan, Systems Development Manager, Mills and Allen International Limited, Buchanan House, 24-30, Holborn, London EC1N 2LY, or Mrs. J. G. G. 01-477 5551.

**Manchester  
Computer Project  
Staff****Project Managers**

We are seeking two project managers, one to handle industrial process control projects, other to handle projects involving data communication networks. Our project managers take responsibility for all aspects of a project. Internally they are responsible for co-ordinating resources, managing the engineering and software teams, assigned to the project and meeting the performance specification within the planned time and cost scale. Externally they provide the main link between the customer and the company. These are senior appointments. Applicants should have a good scientific or engineering background and substantial experience of real-time computer applications in a relevant, with either a supplier or a large user.

**System Designers/Programmers  
Project Engineers**

We have vacancies at senior and intermediate levels for a number of system designers, programmers and project engineers to join project teams, handling real-time computer applications. These are attractive openings for competent professionals who are looking for technical challenge and advancement. Candidates should have at least two years' experience in the real-time field and successful applicants are likely to have a degree in computer science, mathematics, physics or engineering. Successful staff in these categories can expect to progress quickly into senior system design or project management positions.

**Technical Authors  
(equipment and software)**

Good technical documentation—design specifications, operating manuals, programming manuals, maintenance manuals—is essential to the success of any advanced computer project. Our technical authors gather information first hand as full members of the project, engineering and software project teams and are responsible to the Project Manager for writing all the technical literature with a minimum of supervision. Self-motivation, a logical mind and the ability to write clear concise English are more important than formal qualifications although most of our best authors do have a good academic background. Naturally, experience in computer software or engineering would be an advantage but we are prepared to provide training for candidates from other disciplines who are otherwise suitable.

FERRANTI LIMITED is a wholly British Company. We design and manufacture the ARGUS 700 range of computers and are European market leaders in supplying real-time industrial process control and on-line data communication systems. Being system suppliers as well as equipment manufacturers our staff are able to see projects as a whole and the interactions between hardware and software designers within the control. Professional development is encouraged. Competitive salaries will be offered. Generous relocation allowances are available where appropriate. Our offices and laboratories are in a pleasant part of South Manchester close to very good residential areas. Apply in the first instance to Mr. W. L. Robinson, Ferranti Limited, Simonsway, Wythenshawe, Manchester M22 5LA giving brief career details (quote reference WD15 CW).

**Informal Interviews**

If you would like an informal discussion on career prospects with Ferranti in any branch of computer system design, software, project engineering, sales or customer support, senior members of our staff will be happy to meet you at one of the following times and places:

LIVERPOOL:	Adelphi Hotel,	Tuesday 29th November	4.30 pm to 6.00 pm

someone to tell  
us where to go**

Not literally, of course, but we do need an experienced computer professional to conduct specific research into the application of both hardware and software, including systems and programs produced by Software Houses, Bureau and other agencies, to enable our computer department to expand in the right direction.

As our Senior Systems Programmer you will undertake feasibility studies and produce evaluated reports on the use of programming techniques and software. You will estimate and review the time and costs involved in producing Research Group systems as well as prepare detailed programming specifications and outline the more complex programs and sub-routines.

You will need to be an experienced computer professional with a background in programming in 1900 COBOL, GEORGE 2+ and a proven knowledge of computer systems.

Salary is up to £6797 per annum inclusive. 38-hour, 5-day week with overtime operation.

If you would like the opportunity of telling a computer where to go, please write for an application form to our Personnel Officer, Town Hall, London E17 4JF.

Please quote reference B.748. Closing date: 8th December, 1977.

**INTERVIEWS — NEW YORK,  
USA  
IBM O.S. COBOL  
ANALYST PROGRAMMERS**

One of the most prestigious consulting companies in America has vacancies for several high-calibre Data Processing Professionals, who will be assigned to one of several locations in the USA, including major cities and semi-rural areas. In the States, Analyst Programmers are expected to demonstrate ability in a broad range of skills — user liaison, analysis, program design, coding, testing and documentation. For these vacancies OS COBOL is mandatory; any experience in specialist areas, such as IMS, CICS, PL/1 would be of particular interest to our client. Standards of selection will be very high, but candidates who are short-listed will be flown to New York's Kennedy Airport (at our expense) and taken to our client's office for a final interview. An excellent salary package will be negotiated.

**SENIOR NUMERICAL  
CONTROL CONSULTANT**

LONDON, S.W.1. UP TO £8,000

SIA is an International Computer Bureau offering timesharing, batch and remote batch processing services on dual CDC mainframes based in London. SIA is the market leader in technical computing and offers the largest and most comprehensive Numerical Control tape service in the U.K.

The rapid growth of SIA's N.C. tape service business has created the need for an additional Senior N.C. Consultant.

Applicants for this position should have several years experience in industry working in software development and technical support especially for computer-aided N.C. systems on large mainframe computers, and must have in-depth experience of programming in FORTRAN.

The successful applicant will be responsible to the Industrial Systems Manager for the software development of a rapidly expanding range of N.C. systems and the technical support of a large client base. This will involve consultation with client representatives at all levels. Excellent prospects, variety, interest and technical challenge are features of this post. Benefits include a monthly bonus scheme, profit sharing, contributory pension scheme, L.V. and good working conditions.

Please apply to: **John Faxon**  
Industrial Systems Manager  
SIA Ltd., Ebury Gate  
23 Lower Belgrave Street  
London SW1W 0NW  
Tel: 01-730 4544

**sla****Shift Leader**

Required for a rapidly expanding ICL twin 2804 installation with local and remote communication systems.

Applicants should have 3 years' operating experience, with a minimum of 1 year on ICL equipment, and be prepared to operate on a three-shift role.

Our terms and conditions of employment are excellent and include 4 weeks annual holiday, subsidised dining facilities, bonus and pension schemes, and an active social and sports club.

Applications should be made in writing to: Miss G.A. Weston, Personnel Officer

MANAGER  
NEW 2903**

YORKSHIRE

to £5500

Our client is seeking an unusually capable operations person to set up and run the new ICL 2903 installations that will eventually have an extensive communications network attached. The main installation, where the position is based, is between Huddersfield and Sheffield.

It is likely that the successful applicant will be experienced on ICL equipment and will have worked in a communications environment. Previous management or shift leading experience will be necessary, together with the ability to grow with the use of data processing within the company.

Salary and conditions of service are excellent, and assistance with relocation to this delightful rural location will be given if necessary.

Bank House, Queen Street, Sheffield, S1 1UF.  
Tel: Sheffield (0742) 738794.

**COBOL PROGRAMMER**

S.W. LONDON

TO £4,900

A competent COBOL Programmer is required to work in our client's computer centre, which is conveniently located close to bus, main line and tube services. ICL 1902T hardware is operated under GEORGE II. A variety of financial and accounting systems are run using both batch and on-line enquiry techniques.

Work will be in project groups which are structured to allow personal progression. Knowledge of PLAN, GEORGE II, or FILETAB would be valuable but the essential requirement is the ability to produce working COBOL programs within realistic schedules. Training will be provided where necessary.

**Benefits include — FLEXTIME, SEASON TICKET LOAN, PAID OVERTIME, EXCELLENT HOLIDAYS, COMPREHENSIVE PENSION. For 2 years' experience salary will be negotiable up to £4,900.**

If you would like to join a small, professional yet friendly team, then telephone our CROYDON office or write quoting ref. CW66-7H.

**Computer  
Programmer/Analyst**

North Sea Oil-Aberdeen

Occidental, the operators for the Piper and Claymore North Sea oilfields, are committed to a continuing programme of expansion and development. Our small and highly skilled team of computer specialists play a significant role in providing technical and commercial data processing services to the entire operation.

The increase in these activities has created an opportunity for an experienced Programmer/Analyst who can take on the complete responsibility for various new technical applications, which range from helicopter scheduling to contour mapping. Candidates, male or female, should be familiar with time-sharing and data-base techniques and have had a minimum of four years' experience as a Computer Programmer.

If you believe you match our requirements and are seeking a challenging and rewarding career, please write with brief curriculum vitae to:

Mrs. Ann Reynolds, Occidental Scotland Inc., 127 Causeway, Aberdeen AB9 3TF

**OKY****Berlei plans new ICL 2950****Analyst / Programmers  
Programmers****Slough**

Berlei is one of the industry leaders in the manufacture and marketing of foundation garments and swimwear.

They have a requirement for development staff at all levels, who can accept the challenge of developing new systems on ICL's most recently announced machine, the 2950 using TP and IDMS under VME/K.

The company has long recognised the benefits of ON-LINE systems (they have three Driver Programmes under Comms. Manager on their ICL 1902T) and the delivery of the 2950 in August 1978 is in accordance with their objective to put all major systems and files ON-LINE throughout the company and its seven factories.

Berlei require you to have a minimum of 2 years' programming experience using COBOL on any machine; some exposure to analysis would be welcome but by no means essential. Above all, if you really wish to be involved and to contribute to the well-being of your business, at the forefront of software design, join Berlei and its ICL 2950.

Salary will not present a problem to the right applicants and training will be provided as necessary.

In the first instance please contact John De La Mere on 01-549 3212 for further details.

**Future Systems  
Data Base Real Time  
Distributed Processing**

Cobol programmers are required in the West End. One of the most interesting and rewarding openings for mainframe programmers in recent years has arisen.

A major international company is on the threshold of a five-year development programme and wishes to recruit the first phase of its programming intake.

Already an existing IBM user, they will have to upgrade their 370 to cope with their Data base, Real time, and Distributed Processing systems development.

This ground floor opportunity is open to applicants with a proven record of Cobol programming on any machine.

Competent COBOL programmers will not find the salary a problem and will enjoy the benefits of working for a prestige company with technical training, career progression into analysis and management in addition to probable overseas travel to consult with users.

To secure an interview, please telephone 01-549 3212 and speak to Clive Hartrup.

**Sussex Coast  
Cobol Programmers  
c. £4800**

Are you tired of City life? Would you like a place by the sea? If so a breeding atmosphere awaits you in the south. You could join a development team in an interesting and stimulating environment. You can use your COBOL knowledge in the development of commercial and manufacturing systems.

Our client is embarking upon a significant upgrading of its D.P. facilities including an orientation towards management information systems. They offer excellent benefits and prospects as part of a progressive group, including relocation assistance where appropriate and a profit sharing bonus scheme.

Ring Stella Mitchell immediately to arrange your interview.

**Technical  
Support  
Manager****Designate**  
**c. £8,500 p.a. plus car**

RTZ Computer Services is an independent company, within the RTZ Group concerned with the development of computer-based financial systems.

The rapid expansion of the time-sharing division of this company has created the need for further technical support. Reporting to the Sales Manager (the person appointed will be required to provide technical support for the sales team, organise customer training and generally assist in the resolution of clients' technical problems, both for pre- and post-sales).

Candidates should have a sound financial background with a working knowledge of FORTRAN and some experience of BASIC.

Ideally we are looking for someone in his or her late 20s who is carrying a similar range of responsibilities at present. We are also willing to consider applications from less experienced persons who are looking for an opportunity to grow with an expanding company.

**RTZ Computer Services** a member of the RTZ Group

Please apply in writing giving age, career to date and present salary or phone for an application form to: Philip W. L. Blair, RTZ Computer Services Ltd., 103 Jermyn Street, London, SW1 1. Tel. 01-830 4163.

## MOVE INTO SOMETHING NEW!! PROGRAMMERS—ANALYSTS—SYSTEMS ANALYSTS £4,000-£5,500

A major food manufacturer has a requirement for the following people

**JUNIOR ANALYSTS/SYSTEMS ANALYSTS:** These positions offer the opportunity to move into support and development areas of batch and on-line applications. If you are familiar with an IBM environment and are interested in the latest developments of on-line and database techniques, this could be the opportunity you have been waiting for.

The company currently uses IBM 370/148 and 145 mainframes with on-line database facilities, in a friendly and professional environment. Their modern premises are situated in the most picturesque rural surroundings in an easily accessible area of Surrey. If you feel that the time has come for you to enter a dynamic environment, where with the right training you can make a positive contribution to the company's expansion, then ring us for a preliminary discussion on 01-439 6299 quoting ref. no. W.G. 972.

**PROGRAMMERS:** If you have been programming for the past 18 months, preferably in a commercial environment, and feel that you want to use your past training to progress rapidly in an expanding department, then our clients want to see you. You must have a knowledge of PL1 and OS/VS 1 would be an added advantage.

## occ computer personnel limited

### West London Salesmen (Male or Female) Earnings £6-£10,000 p.a.

Our client is a thriving computer bureau, needing more salesmen in order to fully exploit the buoyant marketing situation which now presents itself. A new service based on intelligent terminals has recently been introduced, and this is being well received by the market.

Candidates must have sufficient systems and programming knowledge to understand the technical content of the bureau service, and must already be experienced salesmen. Ideally they will already have sold for a bureau, or have had experience in selling for a computer manufacturer. The sales area to be covered is in South London and Southern Home Counties.

Ref: 832CW/Neville John

### London Consultants & Programmers £4,000-£7,500

SYSTEM TEN & SYSTEM 1500

Excellent opportunities exist with an expanding software house for experienced ICL SYSTEM TEN or SYSTEM 1500 personnel. Various Real Time projects, based in London and other UK sites, include a Building Society and a Hospital application as well as a software development project for communication systems network. The positions are based in West London or Reading. Opportunities to work on overseas projects also exist.

We are interested in ASSEMBLER programmers with several years experience, including a minimum of one year on SYSTEM TEN and/or SYSTEM 1500. We will also consider applicants with only two years' experience in COBOL and ASSEMBLER on other machines.

Senior candidates should have been involved in the successful implementation of a number of projects and must be able to assume a supervisory function as Project Manager or Team Leader.

Ref: 684/CW/Renée Nute

Salaries in excess of the maximum quoted above are negotiable for exceptional candidates able to justify high salary expectations.

### Reading Senior Operator Team/Shift Leader £3,000-£5,000 + s.a.

Our client is a Software House with a well-established UK and Overseas market. Immediate vacancies exist in READING at a Computer Centre housing a number of ICL mainframe installations which provide a machine time service. Candidates should be experienced 1900 George 3 operators who ideally will also have had some experience of supervising operations staff. We would be particularly interested in applications from senior operators with a minimum of 30 months experience who are seeking a team leader position. Alternatively operators with at least 18 months' relevant experience, in addition to a potential ability to lead a small group, may wish to apply for senior operator positions.

The sterling salary will be negotiable and depend on previous experience. A three shift, 5-day week system is involved for which a 20% shift allowance will be paid on top of the salary. These vacancies offer an opportunity to join a rapidly expanding organisation.

Ref: 102/CW/Sandy Lloyd

### Minis & Micros Analysts & Programmers £4,000-£6,500

Opportunities with Consultancies & Software Houses

We have a continuing requirement for Analysts and Programmers with a minimum of 1 year's real-time mini and/or microprocessor experience who are interested in joining a Consultancy or Software House organisation. Vacancies exist at all levels and provide the opportunity to gain experience on many different types of hardware. Applications areas are varied, covering commercial, financial, industrial, scientific, military and process control, as well as basic software development and enhancement. Positions are mainly based in the South East, many also offering the opportunity of short and long-term overseas assignments.

Of particular interest is assembler experience on POP-11, Nova Hewlett-Packard, Honeywell Series 15, Intel or Computer Automation hardware, but any Real-time mini or micro experience would also be of interest. Preference is for a good academic background and for many positions some mobility could be required. Salaries in excess of the figures quoted could be negotiated for exceptionally well qualified applicants.

Ref: 3011/CW/Sharon Matthews.

To apply for any of the above positions or for further information, please telephone the Consultant concerned during working hours on 01-242 9366, or write to the above address. If it would be more convenient to telephone in the evening, the telephone numbers are: Neville John — Farnborough (Kent) (66) 52017. Renée Nute — 01-874 6372. Sharon Matthews — Billerica (02774) 22351. Sandy Lloyd — 01-891 6168.

## Computer Operators

(Shift Leaders Designate)  
Keston, Kent

Seismograph Service is a geophysical contractor, heavily involved in search for oil, gas and minerals. Our Well Survey Division, which has been in size over the past 3 years, uses mini computers to process geophysical data obtained from wells throughout the world. Currently we are looking for Computer Operators who have the potential to become Shift Leaders.

The ideal candidates will have, apart from experience of operating a scientific environment, 'O' level in Maths and/or Physics and be aged 18-25. Initial salaries, which include shift and overtime payments, will be £3,750 p.a. On promotion to Shift Leaders, earnings will be £4,500 p.a. Benefits are in line with a modern progressive company and include a pension and social club and subsidised staff restaurant.

Please write or telephone for an application form to Bruce Stirling-Hamilton, Senior Personnel Officer, Seismograph Service (England) Limited, Holwood, Keston, Kent BR2 8HD. Tel: Farnborough (Kent) 33365. Applications are invited from men and women.

## datascene

SYSTEMS PROGRAMMERS  
to £6500  
TAKE YOUR PICK!

Amongst the many, we have two exceptional jobs this week. Both offer real career prospects in a progressive environment, both are based in the West End of London.

The first is with a Software House operating an IBM system under BOS, although a knowledge of COBOL is essential. In addition, you should be familiar with CICS or TP Monitors. A background in high level languages is preferred, and 3-4 years' Systems experience.

The second is with a national retail chain, operating an IBM 370/45 system under DOS/VSE, using POWER, GRASP, and IMS Databases. If you have around 3 years' experience at ASSEMBLER, ring today.

These are just two of the jobs we have to offer. We have many, many more offering salaries between £3500-£7000 p.a. and benefits ranging from free lunches to cheap mortgages.

FOR FURTHER DETAILS CONTACT US NOW.

SENIOR FORTRAN  
PROGRAMMERS  
to £6500 N.W. London

If you can handle an IBM 370/138 system under OS and VSE, you're needed now for a challenging project by a Petrochemical Engineering company. A background in structural engineering would be an advantage.

We also offer exceptional opportunities to Fortran Programmers with experience in Finance, Operations Research, Engineering and Graphics.

Timings are available all over London and the Home Counties with clients ranging from users to software houses. Salaries range from £3750 to £7000 p.a.

Remember — the sooner you ring us the sooner you can start. So ring us today.

What Next?

Micro Focus is looking for Systems Programmers, High and Low Level Language background. Mini, Micro experience. We will put your talents and energy to work on new products. Permanent or Freelance.

Contact: Brian Reynolds, or Paul O'Grady, Micro Focus Limited, 18 Vernon Yard, Portobello Rd., London W1A 2DX. 01-727 6814.

## Senior Systems Analyst

Watford, Herts.

We require an experienced Analyst to join our Computer Services Department.

The work entails liaison with user departments, systems design and specification, liaison with programmers, systems testing and user training in both batch and on-line situations.

We have a mature installation with systems covering most facets of a competitive commercial environment. There is a large on-line system linking remote sites via VDU's and we believe that the main thrust of our future development will continue to be within the transaction processing field.

Analysts interested to know more should telephone Brian Corner, Manager Computer Services, on Watford 44381.

H. J. HEINZ CO. LTD.  
60 EXCHANGE ROAD,  
WATFORD, HERTS.

## DATABASE/ REAL-TIME London W.1.

Development of major new systems including DATABASE (DBMS) and REAL TIME applications plus phased transition from ICL 1900 to a large 2900 configuration has created several excellent career openings at our client West End installation.

Training in modern techniques will be given where required. This is a well organized environment, working to high standards on large scale systems. We have been retained by a major organisation to recruit for the posts identified, and would welcome an opportunity to discuss the openings with you. Please ring us, quoting the appropriate reference, or leave a message on our answering machine after hours.

Tel: 01-637 5796

**EDP Systems**  
52-53 Margaret Street  
London W1N 7FF

Appointment	Salary Up To	Job	Requirements
<b>DATABASE SPECIALIST</b>	<b>£7500</b>	To lead Database Team (5) as the senior advisor/planner in this field at the installation, with responsibility for major on-line applications, using ICL 2980.	Upwards of six years' computing experience, including database design and implementation, plus team leadership ability.
<b>SNR. SYSTEMS ANALYST</b>	<b>£6250</b>	Analysis work on major systems, including feasibility studies, proposals, implementation and user presentations, both ICL 1900 and 2980.	Upwards of five years' O.P. experience, including significant systems analysis and design, plus team knowledge.
<b>ASST. CHIEF PROGRAMMER</b>	<b>£6250</b>	To lead a team designing and implementing an on-line system on ICL 2980, from design through to implementation, using database facilities.	Upwards of four years' programming experience on ANY MAINFRAME, knowledge of a modern operating system, plus leadership ability.
<b>SOFTWARE PROGRAMMERS</b>	<b>£5200</b>	To work in small team of user facilities and support, ICL 2980, including changes to VME/8 operating system, and MAC, TP and IOMS software.	2-3 years' programming experience on ANY MAINFRAME, including a large machine operating system and special purpose software.
<b>APPLICATIONS PROGRAMMERS</b>	<b>£5200</b>	To work initially on ICL 1900 in COBOL (possibly with some PLAN), under George 11, and to transfer in due course to COBOL on 2980. Applications include transaction processing and the use of databases.	2-3 years' programming experience, including COBOL, on ANY MAINFRAME. A working knowledge of PLAN would be valuable.

## Cobol Programmers unrunt yourselves

Stimulate, variety, an ever-growing work environment, new problems to tackle, rewards to match your ability - that's what we offer. Marcol are fast to the computer software consultancy scene in Britain but already we are well established. For many years ago our aggressive dynamic, multi-faceted approach has earned us a reputation as the market and we are now poised for further expansion. We consider ourselves to be in the field - and with reason. People are our major asset and when we recruit we have the resources and opportunities to attract the best.

At the moment we need Cobol Programmers of varying degrees of experience. We need people with imagination and versatility. Involvement and a chance to develop your career. Your experience, to recognize your salary and to develop your career in a highly motivated organization that is growing fast. Contact us now. Phone Derek Ashley on 01-402 8365. Find out more about our company and if you are impressed we will arrange a personal interview for you. Marcol Computer Services Ltd, 80 Queens Garden, London, W2.

Dynamic Systems for tomorrow's needs

## Analysts and Systems Programmers

TSB Trust Company Limited is the Life Insurance and Unit Trust Company of the Trustee Savings Banks and is situated in a modern office in Andover Town Centre.

The Company is taking delivery of a B3800 configuration early in 1978. This equipment will provide processing facilities for an advanced integrated system with real time characteristics. System development and implementation will take place over several years, resources being provided by an outside software house and by an in-house development team.

Current in-depth experience in at least two of the following fields is mandatory:

Real time applications  
Data Base technology  
Burroughs Medium Systems

This is an unusual opportunity to join a long-term project of outstanding interest at an early stage of development.

Applications should be addressed to:  
Angela Chris, TSB Trust Company Limited,  
P.O. Box 3, White Bear House,  
21 Chantry Way, Andover,  
Hants. SP10 1PG.

Applications should arrive not later than 2nd December, 1977.

### System Support Analysts

Up to £5,500  
+ Car, Bonus, Benefits

Our clients, one of the World's leading manufacturers of Computers, are now recruiting to meet a continued expansion within the U.K. They are particularly looking for support staff to back up their dynamic sales division marketing technically advanced stand alone computers, mini-computers and teleprocessing equipment.

We have been retained to look for ambitious men or women with the following qualifications:

- \* Suitable manner, demeanour and personality to work in a sales environment.
- \* In-depth software experience, preferably in ASSEMBLER languages/COBOL/FORTRAN, and knowledge of operating systems.
- \* General hardware knowledge.
- \* High degree of personal motivation and initiative.
- \* Preferably a Degree, HNC or equivalent.

Desirable, but not essential, additional experience would be that you have worked with a computer manufacturer in a systems support role, as would experience in such areas as data base, data communications, etc.

These are exciting and rewarding opportunities to join a fast growing company. Our Clients not only offer the usual benefits associated with big organisations but also have an extremely attractive bonus scheme.

## SOUTH EAST THAMES REGIONAL HEALTH AUTHORITY

### Systems Analysts and Programmers

Salaries on scales  
ranging from £4408-£6487

At whatever level you join, the variety of work, the ambitious schemes afloat, the sense, the freedom to use initiative, and the opportunity to go places, together add up to some of the most exceptional jobs in this field. The location is easily accessible by bus, tube and train, plus free parking facilities.

The Regional Computer Centre provides computer services for Health Authorities in South East England dealing with everything from payroll to supplies to monitoring child health care, and employs about 150 people. The mainframe computer is an ICL 1904S (128K) with discs, tapes, printers, communications processor and associated peripherals.

For Systems Analysts the work involves going out frequently around the Region, meeting people, accumulating considerable knowledge of health services activities. After the fact finding stage you will often conduct feasibility studies then see the project through to implementation and monitor post implementation performance. If you have the ability there are avenues for progress to top level appointments.

For Programmers close liaison with your professional colleagues provides an added stimulus plus the interest of advanced programming techniques. There is opportunity for promotion to more senior grades or to Systems Analyst work.

A particularly interesting project which the Centre is undertaking is a joint experiment which concerns evaluating two major systems applications in Tunbridge Wells and Bromley as well as comparing the performance of two different manufacturers' equipment. Maybe your background makes you an ideal candidate to become one of the evaluation team.

To find out more, telephone or write for an application form to:

Regional Computer Services Offices  
South East Thames Regional  
Computer Centre  
Brook Drive  
London SE11 4TH  
01-735 4881 Ext. 36

Closing date for applications 9th December, 1977

### Operators to Shift Leaders

£2,000-£4,000 (incl.)

LONDON & HOME COUNTRIES

We have many vacancies covering all types of machines and locations. Some firms will retain from one manufacturer to another. Remember these positions are for this working only. Hurry while stocks last. CW 47/1, Pauline.

### Mini Computer Programmers

to £6,950

U.K. Your experience is required now. A very large number of vacancies are registered where a knowledge of Assembler or communications experience is essential. (VRC programmers would also be considered). Opportunities exist in S.W., N.W., or W. London, Surrey, Herts and Manchester in this exciting and rewarding field. There has also been migration some overseas posts to people with 5 or more years in mini computers. CW 47/2, Michael.

### Systems Consultants

£6,000-£9,500

CENTRAL LONDON. Some large well-established consultancies want to recruit systems people with all-round experience on third generation equipment and the right personality to deal with clients who require a first rate service. Technical consultants are also required where there is depth implementation experience of IBM or ICL TYP message switching software, etc. are essential. Excellent fringe benefits and prospects. CW 47/3, Michael.

### RPG II Programmers

£4,000-£6,500 +

LONDON & H. COUNTRIES

We now have eight commercial companies who have vacancies for RPGII programmers and Analyst Programmers. Jobs exist in London, W. London, Middlesex, High Wycombe, Epsom and in Dorset. Most firms offer L.V. & 4 weeks' holidays, etc. CW 47/4, Assente.

### Successful Salesmen to £12K quota earnings

U.K.

We now have two different firms for both hardware and systems only companies who are serious to meet successful salesmen in this industry. They must have previous relevant small systems experience (some VRCs will be considered). All firms have bonus schemes and cars or car allowance. Most positions in S.E. England, but 2 in Midlands. CW 47/5, Michael.

### Time Sharing Programmers to £6,000

C. LONDON

If you have had time sharing experience involving the use of FORTRAN, BASIC or ASSEMBLER, then we have four nationally known companies who would offer you an exciting job in pre- or post-sales support. Some offer generous bonus schemes. CW 47/6, Michael.

### Technical Authors

W. London & Herts.

£5,000

Four manufacturing companies are looking for competent technical writers with mini or mainframe experience. CW 47/7, Michael.

### Contract Programmers

to £190 p.w.

U.K.

Immediate requirements for IBM RPG II & IBM COBOL under DOS or PS for C. London, P.V.I. OS or CICS. RPG II or COBOL, both for various locations for 3 months plus. Also IBM mainframe programmer. Ask for the Consultant's Office. CW 47/8, 2336, CW 47/9, Michael.

## SYSTEMS PROGRAMMERS ANALYST/PROGRAMMERS

SALARY £4,500 to £7,500 p.a.  
with additional benefit

Alimand Management Services Ltd have specialised with an acknowledged degree of success in Mini-Computer applications currently concentrated in the banking and financial sectors.

Following sure and steady expansion we are currently recruiting efficient and mature personnel to fill interesting and demanding assignments in the UK and the Americas. There are a range of opportunities from one year's experience upward, with details of experience to Alimand Management Services Ltd., 250 Brompton Road, London SW3 2AT.

## Are you satisfied

that your present job, salary, location and prospects are all that you want them to be? If you are not, contact talk to one of our consultants. They understand the problems. They know the market across the entire DP field including sales.

## Look Forward to a Prosperous New Year with AJK

The AJK Group of Companies is currently recruiting staff for its planned expansion in 1978. Well established in the Computer Services field, we require ambitious people who are interested in a challenging and well paid career with a forward looking company. Our plans include opening new offices in the U.K. and entering the European market. If you have the necessary qualifications for any of the following positions contact us now, and make an appointment for a HAPPY NEW YEAR.

### Sales Executives

We are looking for experienced sales people to assist our expansion in the freelance market. Previous experience preferable, but not essential if the right attitude and approach can be demonstrated. A basic salary plus commission and other fringe benefits will be paid.

Location: London and Birmingham. c £10,000

### Personnel Consultants

Applicants should have at least three years experience in the D.P. industry with a good knowledge of the job market. Previous experience in the recruitment field desirable but more important is an ability to communicate with people at all levels, and achieve pre-determined targets. Good appearance and pleasant personality essential.

Location: London and Birmingham. c £7,500

### Interviewers

Our sister company AJK Recruitment, requires experienced interviewers, preferably in the O.P. field. Ability to communicate with people and willingness to take responsibility essential.

Location: London. c £5,000

Telephone or write quoting the appropriate reference.

Kent House, 87 Regent Street, London W1R 7HF  
Tel: 01-437 2062/3/4 (24-HOUR ANSWERPHONE)

## DATA NETWORK CONTROLLERS

Infotron Systems is seeking Engineers experienced in teleprocessing networks to assist in major projects which the Company has recently been awarded.

The positions are based in both London and Manchester and will involve some limited shift work on site.

There are prospects of travel both in and outside the UK.

We are seeking Engineers with experience in both communications and computing hardware who have HNC/HND Electronics.

Training on Infotron products will be given.

## Infotron Systems Limited

Systeme House, Poundbury Road  
Dorchester, Dorset DT1 2PG  
Dorchester (0305) 66016

## DATA PROCESSING MANAGER

for a major computer function - with 90 staff and a budget of £1.2m p.a.

c.£9000

Essential qualities required are outstanding managerial skills, particularly the ability to communicate at all levels, to motivate staff and to produce results. You will be accountable to the Director of Management Services for planning and providing an efficient and cost-effective data processing service using a Univac 1106.

Westminster City Council employs nearly 8,000 people, has a rate income of £200m and provides a wide range of services including housing, social services, town planning, libraries, environmental health and consumer protection. First-class data processing facilities are vital to support the Council's administration. A key part of your role will be to identify the organisation's computer requirements and to provide the technical capacity to meet them.

Many of the Council's activities are based on properties within its boundaries and a property information system, co-ordinating data used by several departments, is planned. This project will provide a challenging range of technical problems involving the use of terminals and data base techniques.

Man and woman who can offer the experience and personal attributes we need are invited to write briefly, giving enough information to justify a preliminary interview, to:-

Clive Bate, Director of Management Services (MS28)  
Westminster City Council  
PO Box 240, Victoria Street, London, SW1E 8OP

Further details will be sent to invited applicants.

## MERSEYSIDE OPPORTUNITIES FOR TECHNICAL & SALES INDIVIDUALS

Our Clients, a well-established and respected Computer Services Company based in Merseyside, seek 2 people to augment their marketing team.

### SALES EXECUTIVE

Salary:- c. £5,000 plus bonus, plus car.

This is a superb opportunity for a salesman with data processing experience to sell software services within Great Britain and possibly the European market place. He/she should ideally be based within the Merseyside area and be prepared to travel extensively throughout Great Britain developing the client base.

Our Clients will offer the successful candidate superb technical resources and a respected name within the industry.

### PROMOTION/PUBLICITY CO-ORDINATOR

Salary:- c. £5,000

This is an ideal opportunity for a Programmer or Systems Analyst to move into the stimulating challenging environment of marketing. The successful candidate will take responsibility for all promotion/publicity for an expanding Computer Services Company. You should ideally have a sound computing background combined with a flair to communicate both verbally and via the media. Responsibilities will include: press releases, advertising, presentations and brochures.

Our clients offer excellent terms and conditions of employment including: pension and the excitement of working for a fast growing young company.

Initial interviews will be held in either Liverpool or Manchester.

MORGAN GUARANTY TRUST COMPANY  
OF NEW YORK

cherche un

**data  
processing  
manager**

Situation: BRUXELLES

Salaire: 1.000.000 FB

Morgan Guaranty est la cinquième banque commerciale des Etats-Unis. Elle compte 13 succursales à travers le monde dans les principaux centres financiers et des filiales dans 35 autres pays.

Etablie depuis 1919 en Belgique, Morgan Guaranty emploie environ 500 personnes dans ses sièges de Bruxelles et d'Anvers.

La banque entame une importante nouvelle étape en informatique dans laquelle le Data Processing Manager devra jouer un rôle important.

Ses responsabilités comprendront:

- le commandement d'une équipe d'environ 30 personnes, la direction d'un centre équipé d'un ordinateur IBM 370/145 travaillant 24 heures sur 24, la responsabilité budgétaire du centre, la participation à la planification des nouveaux systèmes et de l'équipement.

L'on attend de lui:

- qu'il ait l'expérience d'une installation informatique moyenne ou importante, qu'il soit parfaitement bilingue anglais/français.

Il pourra s'attendre aux avantages extra-légers traditionnels ainsi qu'à une aide en matière de déménagement.

Les candidatures seront à adresser à Monsieur J. Bruylant, Morgan Guaranty Trust Company of New York, avenue des Arts 35, B-1040 Bruxelles, Belgique, qui lui fera connaître les conditions de travail.

**370 Software Support****An Opportunity  
in Commercial  
Administration**

We are a major UK copper railway engaged in extensive international trading commodity market transactions. We wish to recruit a young executive of about 25 years of age to fill a new position in our commercial department. His/her first task will be to establish computer based systems for financial control and market intelligence and on its completion he/she will be engaged more generally in the work of the commercial department.

Thus the post provides an excellent opportunity to gain experience in a demanding but stimulating environment and the opportunity for extensive career development in the commercial and trading spheres.

The post should appeal to young accountants or system analysts interested in the commercial field who wish to broaden their business experience or to recently qualified graduates in economics or business studies.

Please telephone or write to the Personnel Manager, - Walsall 21282.

IMI Refiners Limited,  
James Bridge Copper Works  
Darlaston Road, Walsall WS2 9SJ.

**Knight****Knight Computer Services Limited****370/138 Operator**Salary £3,200  
(Inclusive of Bonus)

We are market leaders in the U.K. cosmetics field manufacturing and selling a wide range of cosmetic and skin care products.

We have recently upgraded our IBM machine to a 370/138. We require an operator (male/female) with at least one year's experience of such a machine who also has knowledge of OS/VS1 to join our Information Data Services team operating to a two shift system.

If this position interests you write or telephone:

Mrs Joan Leslie, Personnel Manager, U.K. Group, Max Factor &amp; Co., P.O. Box 3, Francis Avenue, West Hove, Bournemouth BH11 8NZ. Telephone No. (0202) 25541.

**MAX FACTOR****K & S**

One of the leading local government installations

**SYSTEMS ANALYST** to £5800  
**SENIOR PROGRAMMER** to £5350  
**PROGRAMMER** to £4500

Location: Worcester Park, Surrey

We are about to take our next step to keep us in the forefront of local government computing. Our 11 and 15 are on order as is an IBM 370/148 to replace our existing 370/145.

We are offering an exciting career path for all the positions shown above, as we extend our T.P. network with the introduction of more V.O.L.S. and mini-computers and as we begin implementation of PL1 and GIS.

We operate under OS/VS1 and CICS and program in PL1 and Assembler. Where relevant experience is missing full training will be given.

If you can offer us ability and enthusiasm we will give you the chance to prove your worth in a challenging environment.

Telephone Doug Keward or Ian Forrist on 01-337 4403 or, if preferred, apply in writing to:

**KINGSTON & SUTTON J.C.C., COMPUTER CENTRE**  
GREEN LANE, WORCESTER PARK, SURREYBroaden your knowledge,  
and ours!

We have recently enhanced 54K 1902T, with embryonic communications facility. We are also beginning to develop with database. Why not come and learn with us? In addition we have an ever-growing range of applications in such fields as Library Stock Charging, Ordering and Cataloguing, Income Processing and Lend Usage. To complete our team we require two additional staff:-

**1. A SYSTEMS ANALYST**, £5644-£5947 p.a. with a programming background, and about 18 months' systems experience to formalised standards. The successful applicant will participate in a project team environment, responsible for some of these applications. Ref. No. IC/49/CW.

**2. A PROGRAMMING TEAM LEADER**, £5194-£5500 p.a., who, using his organisational skills plus his COBOL and PLAN experience, will accept the full programming responsibilities for a group of these applications. Considerable discretion will be given to the successful applicant to carry out these duties. Ref. No. IC/50/CW.

The installation is situated near to King's Cross, St. Pancras and Euston main line stations. A 38-hour week is worked with flexitime, and generous holiday allowances. Interest-free loans are available for the purchase of annual season tickets, and a subsidised staff restaurant is provided.

Call Mike Black (X2251) or Chris Coker (X2049) on 01-278 4444 to hear more about the job.

For application form please telephone our 24 hour recruitment answering service 01-637 9988 or send a postcard to the Civil Executive, London Borough of Camden, Town Hall, Euston Road, London NW1 2RU stating post and reference number.

WORKING BOROUGH COUNCIL

**Computer Operator**  
**£2998-£3480 p.a. (incl.)**

We are seeking an experienced Operator to run the Council's ICL 2904 computer with Direct Data entry 60K Store and EOS 60 Communications equipment in use and data processing is also carried out for other Councils. The social works on a 2 shift system - 7.30 hours through Mon-Fri. Training may be given to suitable applicants.
